Transforming Process Theism Lewis S. Ford, 2000-05-18 Process theism in a variety of manifestations and modifications stemming from Whitehead's original suggestions dominates discussions of philosophical and natural theology in Europe and America In Transforming Process Theism Ford argues that subsequent modifications of Whitehead's original line of thought mask a fundamental and unresolved aporia in that original proposal since only past or objectified determinate events can influence present experiences and since God as conceived by Whitehead is never fully determinate or objectifiable as a past event it is difficult to see how this divine persuasive power can have any influence on the present as a source of creativity and genuinely new possibilities for enactment Ford meticulously reconstructs and evaluates Whitehead s own versions of theism and he critically appraises the most influential subsequent modifications of these unrecognized variants by other process thinkers He recovers the original trajectory of Whitehead's continuous revision of his conception of God and forges an appropriate solution to this central aporia He concludes that consistent with Whitehead's overarching metaphysical principles there is another kind of causal influence that does not require objectification and is the opposite of past determinateness The future conceived as active offers an account of subjectivity which is both universal and transcendent God according to Ford's revisions must be understood as this particular but indefinite creativity or universal activity of the future bestowing subjectivity on each present occasion of experience without ever becoming determinate **Breath** Amos Yong, 2012-05-10 Recent thinking in the interfaith dialogue and in the theology science dialogue have taken a pneumatological turn The Cosmic Breath explores this pneumatological theology as unfolded in the Christian Buddhist dialogue alongside critical interaction with the theology and science conversation As an attempt in comparative and constructive Christian philosophical theology its central thesis is that a pneumatological approach to Buddhist traditions in further dialogue with modern science generates new philosophical resources that invigorate Christian thinking about the natural world and humanity s place in it The result is a transformation of the Buddhist Christian dialogue from insights generated in the theology and science interface and a contribution to the religion and science dialogue from a comparative theological and philosophical perspective God and Gravity Philip Clayton, 2018-08-23 Philip Clayton is well known as a major thinker working at the interface of science philosophy and Christian theology Here for the first time a representative selection of his far reaching works have been brought together into one place After a general introduction to the breadth of Clayton's writing the book is divided into six main sections 1 Science 2 Science Faith 3 Panentheistic Reflections on Science 4 Science 5 Science Spirit and 6 Progressive Theology This introduction and reader will become the go to text for all inquiries regarding Philip Clayton's expansive theology
