Searing, 2014-08-06

Ideal for public school and academic libraries looking to freshen up their reference collection as well as for LIS students and instructors conducting research, this resource collects the cream of the crop sources of general reference and library science information. Encompassing internet resources, digital image collections and print resources, it includes the full section on LIS Resources from the Guide to Reference database which was voted a 1 Best Professional Resource Database by Library Journal readers. Organized by topic and thoroughly indexed, this guide makes it a snap to find the right sources. It offers an appealing introduction to reference work and resources for LIS students and also serves as an affordable course book to complement online Guide to Reference access. Cataloging and Classification Athena Salaba, Lois Mai Chan, 2023-07-24

The new edition of this essential work has raised the bar on an already excellent text about cataloguing. Library Journal Starred Review. The fifth edition of the classic Cataloging and Classification covers the analysis and representation of methods used in describing, organizing and providing access to resources made available in or through libraries. Since the last edition, there have been new developments in cataloging with the introduction of the IFLA Library Reference Model (LRM) and the new official RDA following the 3R Project. This text presents the essence of library cataloging and classification in terms of four basic functions: descriptive cataloging, authority work, subject access and classification. Within this framework, content has been reorganized; all chapters have been rewritten and new chapters have been introduced to incorporate the changes that have occurred during the interval between the fourth and fifth editions. In each part, the historical development and underlying principles of the retrieval mechanism at issue are treated first because these are considered essential to an understanding of cataloging and classification. Discussion and examples of provisions in the standards and tools are then presented to illustrate the operations covered in each chapter. Divided into seven parts: a general overview, record production and structure, encoding formats and metadata records, RDA, original and official subject access and controlled vocabularies, the organization of library resources, encoding and cataloging ethics, this book includes lists of the standards and tools used in the preparation and processing of cataloging records, covered lists of RDA elements and sample records.
