Forest-Water Interactions Delphis F. Levia, Darryl E. Carlyle-Moses, Shin'ichi Iida, Beate Michalzik, Kazuki Nanko, Alexander Tischer, 2020-02-05. The United Nations has declared 2018-2028 as the International Decade for Action on Water for Sustainable Development. This is a timely designation. In an increasingly thirsty world, the subject of forest water interactions is of critical importance to the achievement of sustainability goals. The central underlying tenet of this book is that the hydrologic community can conduct better science and make a more meaningful impact to the world's water crisis if scientists are 1) better equipped to utilize new methods and harness big data from either or both high frequency sensors and long term research watersheds and 2) aware of new developments in our process based understanding of the hydrological cycle in both natural and urban settings. Accordingly, this forward looking book delves into forest water interactions from multiple methodological, statistical and process based perspectives, with some chapters featuring data sets and open source R code, concluding with a chapter on future forest hydrology under global change. Thus, this book describes the opportunities of convergence in high frequency sensing, big data and open source software to catalyze more comprehensive understanding of forest water interactions. The book will be of interest to researchers, graduate students and advanced undergraduates in an array of disciplines including hydrology, forestry, ecology, botany and environmental engineering.

Balancing Nature and Commerce in Gateway Communities Jim Howe, Edward T. McMahon, Luther Propst, 2012-06-22.
