Smith, 1990      **Construction Materials** Peter Domone, John Illston, 2018-10-03 So far in the twenty first century there have been many developments in our understanding of materials behaviour and in their technology and use This new edition has been expanded to cover recent developments such as the use of glass as a structural material It also now examines the contribution that material selection makes to sustainable construction practice considering the availability of raw materials production recycling and reuse which all contribute to the life cycle assessment of structures As well as being brought up to date with current usage and performance standards each section now also contains an extra chapter on recycling Covers the following materials metals concrete ceramics including bricks and masonry polymers fibre composites bituminous materials timber glass This new edition maintains our familiar and accessible format starting with fundamental principles and continuing with a section on each of the major groups of materials It gives you a clear and comprehensive perspective on the whole range of materials used in modern construction A must have for Civil and Structural engineering students and for students of architecture surveying or construction on courses which require an understanding of materials      CONCRETE, TIMBER AND METALS, The Nature and Behaviour of Structural Material J.M. ILLSTON, 1979      *Timber; Its Nature and Behaviour, Second Edition* Dr Dinwoodie, 2000-02-17 Timber Its Nature and Behaviour adopts a materials science approach to timber and comprehensively examines the relationship between the performance of timber and its structure This book explains a wide range of timbers physical and mechanical behaviour including processing in terms of its basic structure and its complex interaction with moisture The performance of timber and panel products is also related to the levels set in new European specifications and with the associated methods of testing      **Construction Materials** Marios Soutsos, Peter Domone, 2017-10-10 This established textbook provides an understanding of materials behaviour through knowledge of their chemical and physical structure It covers the main classes of construction materials metals concrete other ceramics including bricks and masonry polymers fibre composites bituminous materials timber and glass It provides a clear and comprehensive perspective on the whole range of materials used in modern construction to form a must have for civil and structural engineering students and those on courses such as architecture surveying and construction It begins with a Fundamentals section followed by a section on each of the major groups of materials In this new edition The section on fibre composites FRP and FRC has been completely restructured and updated Typical questions with answers to any numerical examples are given at the end of each section as well as an instructor s manual with further questions and answers The links in all parts have also been updated and extended including links to free reports from The Concrete Centre as well as other online resources and material suppliers websites and now with solutions manual and resources for adopting instructors on <https://www.crcpress.com> 9781498741101      *Construction Materials - Their Nature and Behaviour* Dr J M Illston, J.M.

Illston,1993-12-02 This book provides complete coverage of the main construction materials for undergraduate students on civil engineering and other construction courses It creates an understanding of materials and how they perform through a knowledge of their chemical and physical structure leading to an ability to judge their behaviour in service in construction Descriptions of important properties are related back to the structure and forward to basic practical considerations

Construction Materials J.M. Illston,Peter Domone,2001-08-30 Thoroughly revised and updated the third edition of this popular textbook continues to provide a comprehensive coverage of the main construction materials for undergraduate students of civil engineering and construction related courses It creates an understanding of materials and how they perform through a knowledge of their chemical and physical structure leading to an ability to judge their behaviour in service and construction Materials covered include metals and alloys concrete bituminous materials brickwork and blockwork polymers and fibre composites Each material is discussed in terms of structure strength and failure durability deformation practice and processing The sections on concrete polymers and fibre composites have been significantly revised Descriptions of important properties are related back to the structure and forward to basic practical considerations With its wealth of illustrations and reader friendly style and layout Construction Materials Information Sources in Metallic Materials M. N. Patten,2017-07-24 No detailed description available for Information Sources in Metallic Materials *Durability of Concrete and Cement Composites* Chris L. Page,M M Page,2007-06-30 Whilst most structures made using concrete and cement based composites have not shown signs of premature degradation there have been notable exceptions In addition there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled All these factors have highlighted the issues of what affects the durability of these materials in different circumstances and how material properties can be measured and improved *Durability of concrete and cement composites* summarises key research on these important topics After an introductory chapter the book reviews the pore structure and chemistry of cement based materials providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters These include dimensional stability and cracking processes chemical and microbiological degradation of concrete corrosion of reinforcing and prestressing steels deterioration associated with certain aggregates effects of frost and problems involving fibre reinforced and polymer cement composites With its distinguished international team of contributors *Durability of concrete and cement composites* is a standard reference for all those concerned with improving the service life of structures using these materials Analyses a range of materials such as reinforced steel in concrete pre stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites *High Performance Concrete* Pierre-Claude Aïtcin,1998-07-02 A complete review of the fast developing topic of high performance concrete HPC by one of

the leading researchers in the field It covers all aspects of HPC from materials properties and technology to construction and testing The book will be valuable for all concrete technologists and construction engineers wishing to take advantage of the re
