Ashish Choudhury, Arpita Patra, 2022-10-07 This book focuses on multi party computation MPC protocols in the passive

corruption model also known as the semi honest or honest but curious model The authors present seminal possibility and feasibility results in this model and includes formal security proofs Even though the passive corruption model may seem very weak achieving security against such a benign form of adversary turns out to be non trivial and demands sophisticated and highly advanced techniques MPC is a fundamental concept both in cryptography as well as distributed computing On a very high level an MPC protocol allows a set of mutually distrusting parties with their private inputs to jointly and securely perform any computation on their inputs Examples of such computation include but not limited to privacy preserving data mining secure e auction private set intersection and privacy preserving machine learning MPC protocols emulate the role of an imaginary centralized trusted third party TTP that collects the inputs of the parties performs the desired computation and publishes the result Due to its powerful abstraction the MPC problem has been widely studied over the last four decades
