Petuch, David P. Berschauer, 2020-12-10 Marine biogeography the study of the spatial distribution of organisms in the world's oceans is one of the most fascinating branches of oceanography This book continues the pioneering research into the distributions of molluscan faunas first studied by biologists over 160 years ago It illustrates 1778 species of gastropods in full color many of which are extremely rare and poorly known endemic species that are illustrated for the first

time outside of their original descriptions The spatial arrangements of malacofaunas shown in this book can be considered proxies for worldwide oceanic conditions and used as tools for determining patterns of global climate change The book's documentation of evolutionary hot spots and geographically restricted endemic faunas can also be used as a base line for future studies on patterns of environmental deterioration and extinction in the marine biosphere Documenting the evolution of the amazingly rich worldwide gastropod fauna this book will appeal to physical and chemical oceanographers systematic and evolutionary biologists historical geologists paleontologists climatologists geomorphologists and physical geographers The authors incorporate aspects of all of these disciplines into a new classification system for the nomenclature of biogeographical spatial units found in tropical subtropical and warm temperate seas **South Pacific Bibliography** ,1986
