Abstract

Software Requirements Specification is one of the first phases of system development. This phase results in the Software Requirements Specification (SRS) document, which must contain a complete, concise, high-quality description of the system being considered. The quality assurance of SRSs depends strongly on the use of appropriate techniques. This paper focuses on the use of inspection techniques in the quality evaluation of SRSs, presenting a pilot study on the subject.

Keywords

Software Requirements Specification document, Inspection techniques, Empirical study.

1. Introduction

System documentation includes all of the documents describing the system development, from the requirements specification to the final acceptance plan test. Among these, the Software Requirements Specification (SRS) is a key document, which must contain a complete, concise, high-quality description of the external behavior of the system being considered.

All the functional and nonfunctional requirements for the system have to be written in its SRS ([4], [7]).

To ensure that the contents of an SRS are adequate and compatible with the system's mission, it is necessary to evaluate the documentation generated, by means of appropriate techniques. In this sense, inspection techniques are very effective to guarantee the quality of these documentation ([7], [8]).

This article has several objectives, including: (1) to stress the importance of conducting inspections of SRSs, aiming to obtain high-quality system specification and documentation; (2) to describe how to use the Goal-Question-Metric (GQM) approach in the development and implementation of evaluation programs applied to SRSs; (3) to present a pilot study about inspection, which was performed with the purpose of detecting defects in SRSs.

Section 2 of this article presents an overview of the contents of a typical SRS. Section 3 summarizes the GQM approach. Section 4 describes a pilot study performed on measurement of SRSs, which was proposed and implemented with the support of GQM. Finally, section 5 gives the conclusions.

2. Software Requirements Specification Documents

Software requirements specification is one of the first phases of system development. It involves preparing a complete description of the system's external behavior, represented in terms of functional and nonfunctional requirements. It is a crucial phase of system development, because specification defects will become more and more difficult to repair, as the system is advancing to the next phases of its life cycle [4].

The concrete result of requirements specification is the SRS (Software Requirement Specification) document. There are several standards proposed for
