Andrew Robinson, 2010-09-16 The highly admired scientist Linus Pauling a double Nobel laureate in chemistry and peace was once asked by a student Dr Pauling how do you have so many good ideas Pauling thought for a moment and replied Well David I have a lot of ideas and throw away the bad ones Where do ideas come from Why do some people have many more of them than others How do you distinguish the good ideas from the bad Most intriguing of all perhaps why do the best ideas sometimes strike in a flash of sudden genius These questions are the subject of this book Andrew Robinson explores the exceptional creativity in both scientists and artists by following the trail that led ten individuals from childhood to the achievement of a famous creative breakthrough as an adult in archaeology architecture art biology chemistry cinema music

literature photography and physics Broken into three parts the book begins with the scientific study of creativity covering talent genius intelligence memory dreams the unconscious savant syndrome synaesthesia and mental illness The second part tells the stories of five breakthroughs by scientists and five by artists ranging from Curie s discovery of radium and Einstein s theory of special relativity to Mozart s composing of The Marriage of Figaro and Virginia Woolf s writing of Mrs Dalloway Robinson concludes by considering what highly creative people who achieve breakthroughs have in common whether breakthroughs in science and art follow patterns and whether they always involve imaginative leaps and even genius
