Citizen Spectator Wendy Bellion, 2012-12-01 In this richly illustrated study the first book length exploration of illusionistic art in the early United States Wendy Bellion investigates Americans experiences with material forms of visual deception and argues that encounters with illusory art shaped their understanding of knowledge representation and subjectivity between 1790 and 1825 Focusing on the work of the well known Peale family and their Philadelphia Museum as well as other Philadelphians Bellion explores the range of illusions encountered in public spaces from trompe l'oeil paintings and drawings at art exhibitions to ephemeral displays of phantasmagoria Invisible Ladies and other spectacles of deception Bellion reconstructs the elite and vernacular sites where such art and objects appeared and argues that early national

exhibitions doubled as spaces of citizen formation Within a post Revolutionary culture troubled by the social and political consequences of deception keen perception signified able citizenship Setting illusions into dialogue with Enlightenment cultures of science print politics and the senses Citizen Spectator demonstrates that pictorial and optical illusions functioned to cultivate but also to confound discernment Bellion reveals the equivocal nature of illusion during the early republic mapping its changing forms and functions and uncovers surprising links between early American art culture and citizenship

Dark Data David J. Hand, 2022-02-15 Data describe and represent the world However no matter how big they may be data sets don't indeed cannot capture everything Data are measurements and as such they represent only what has been measured They don't necessarily capture all the information that is relevant to the questions we may want to ask If we do not take into account what may be missing unknown in the data we have we may find ourselves unwittingly asking questions that our data cannot actually address come to mistaken conclusions and make disastrous decisions In this book David Hand looks at the ubiquitous phenomenon of missing data He calls this dark data making a comparison to dark matter i.e. matter in the universe that we know is there but which is invisible to direct measurement He reveals how we can detect when data is missing the types of settings in which missing data are likely to be found and what to do about it It can arise for many reasons which themselves may not be obvious for example asymmetric information in wars time delays in financial trading dropouts in clinical trials deliberate selection to enhance apparent performance in hospitals policing and schools etc What becomes clear is that measuring and collecting more and more data big data will not necessarily lead us to better understanding or to better decisions We need to be vigilant to what is missing or unknown in our data so that we can try to control for it How do we do that We can be alert to the causes of dark data design better data collection strategies that sidestep some of these causes and we can ask better questions of our data which will lead us to deeper insights and better decisions
