

SOCIAL CONSTRUCTION OF RACE

The social construction of race is a sociological concept that holds that the category of race is defined in language and culture rather than objective or biological fact (Gergen, 2015).

DEFINITION

"Race is a recent human invention, a social construct designed to divide members of a society into a hierarchy of social, economic, and political advantage or disadvantage based on a set of randomly selected normal human variations in phenotype."

(Feldman et al., 2022)

EXAMPLE

Italians as whites - Dewhurst (2008) has demonstrated how Italians were not seen as white people in early colonial Australia. As a result, they faced increased discrimination. Over time, as Italian-Australians assimilated and influx of darker-skinned migrants arrived, Italians slowly became included in the category of whiteness in Australian discourse.

Concept Of Race In Natural And Social Science:

The Concept of Race in Natural and Social Science E. Nathaniel Gates, 2014-05-01 Explores the concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of periodicals than even the largest library usually holds Even if all the articles were available on campus chances are that a student would have to track them down in several libraries and microfilm collections Providing of course that no journals were reserved for graduate students out for binding or simply missing This convenient set saves students substantial time and effort by making available all the key articles in one reliable source Authoritative commentary The series editor has put together a balanced selection of the most significant works accompanied by expert commentary A general introduction gives important background information and outlines fundamental issues current scholarship and scholarly controversies Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field After reading the material even a beginning student will have an excellent grasp of the basics of the subject

The Concept of "race" in Natural and Social Science E. Nathaniel Gates, 2013 *The German Invention of Race* Sara Eigen, Mark Larrimore, 2012-02-01 In *The German Invention of Race* historians philosophers and scholars in literary cultural and religious studies trace the origins of the concept of race to Enlightenment Germany and seek to understand the issues at work in creating a definition of race The work introduces a significant connection to the history of race theory as contributors show that the language of race was deployed in contexts as apparently unrelated as hygiene aesthetics comparative linguistics anthropology debates over the status of science theology and philosophy and Jewish emancipation The concept of race has no single point of origin and has never operated within the constraints of a single definition As the essays in this book trace the powerful resonances of the term in diverse contexts both before and long after the invention of the scientific term around 1775 they help explain how this pseudoconcept could in a few short decades have become so powerful in so many fields of thought and practice In addition the essays show that the fateful rise of racial

thinking in the nineteenth and twentieth centuries was made possible not only by the establishment of physical anthropology as a field but also by other disciplines and agendas linked by the enduring associations of the word race

Cultural and Literary Critiques of the Concepts of "race" E. Nathaniel Gates, 1997

The Nature of Race Ann Morning, 2011-06-24

What do Americans think race means What determines one's race appearance ancestry genes or culture How do education government and business influence our views on race To unravel these complex questions Ann Morning takes a close look at how scientists are influencing ideas about race through teaching and textbooks Drawing from in depth interviews with biologists anthropologists and undergraduates Morning explores different conceptions of race finding for example that while many sociologists now assume that race is a social invention or construct anthropologists and biologists are far from such a consensus She discusses powerful new genetic accounts of race and considers how corporations and the government use scientific research for example in designing DNA ancestry tests or census questionnaires in ways that often reinforce the idea that race is biologically determined Widening the debate about race beyond the pages of scholarly journals *The Nature of Race* dissects competing definitions in straightforward language to reveal the logic and assumptions underpinning today's claims about human difference

Philosophy of Social Science Mark Risjord, 2022-07-25

Philosophy of Social Science A Contemporary Introduction examines perennial questions of philosophy through engaging the empirical study of society Questions of normativity concern the place of values in social scientific inquiry Questions of naturalism concern the relationship between the natural and the social sciences And questions of reductionism ask how social institutions relate to the people who constitute them This accessible text offers a comprehensive overview of debates in the field with special attention to new research programs Topics include the relationship of social policy to social science interpretive research cognitive and evolutionary explanations intentional action explanation rational choice theory conventions and social norms joint intentionality causal inference and experimentation Detailed examples of social scientific research motivate the philosophical questions and illustrate the important concepts Treating philosophical commitments as implicit in social science students of the social sciences will benefit from its application of philosophical argument to methodological and theoretical problems The text argues that social science transforms philosophical questions and students of philosophy will benefit from its direct engagement with contemporary debates The Second Edition provides updates with the most recent literature and adds two new chapters one on modeling and one on the role of race and gender in the social sciences

Key Updates to the Second Edition A new chapter on Modeling and Explaining which explores how models represent social systems and whether highly idealized models explain A new chapter on Race and Other Social Constructions capturing much of the recent empirical research and philosophical interest in the social construction of categories like race and gender Revised and updated chapters throughout clarifying earlier presentations and bringing discussions from the First Edition into line with new research Updated annotated Further Reading lists which now include relevant publications from 2013 to 2022

Identity Politics and the New Genetics Katharina Schramm, David Skinner, Richard Rottenburg, 2012-01-01 Racial and ethnic categories have appeared in recent scientific work in novel ways and in relation to a variety of disciplines medicine forensics population genetics and also developments in popular genealogy Once again biology is foregrounded in the discussion of human identity Of particular importance is the preoccupation with origins and personal discovery and the increasing use of racial and ethnic categories in social policy This new genetic knowledge expressed in technology and practice has the potential to disrupt how race and ethnicity are debated managed and lived As such this volume investigates the ways in which existing social categories are both maintained and transformed at the intersection of the natural sciences and the cultural politics The contributors include medical researchers anthropologists historians of science and sociologists of race relations together they explore the new and challenging landscape where biology becomes the stuff of identity

Arguing about Science Alexander Bird, James Ladyman, 2013 *Arguing About Science* is an outstanding engaging introduction to the essential topics in philosophy of science edited by two leading experts in the field This exciting and innovative anthology contains a selection of classic and contemporary readings that examine a broad range of issues from classic problems such as scientific reasoning causation and scientific realism to more recent topics such as science and race forensic science and the scientific status of medicine The editors bring together some of the most influential contributions of famous philosophers in the field including John Stuart Mill and Karl Popper as well as more recent extracts from philosophers and scientists such as Ian Hacking Stephen Jay Gould Bas van Fraassen Nancy Cartwright and John Worrall The anthology is organised into nine clear sections science non science and pseudo science race gender and science scientific reasoning scientific explanation laws and causation science and medicine probability and forensic science risk uncertainty and science policy scientific realism and anti realism The articles chosen are clear interesting and free from unnecessary jargon The editors provide lucid introductions to each section in which they provide an overview of the debate as well as suggestions for further reading

Race, Nature and Culture Peter Wade, 2002-06-20 Since the controversial scientific race theories of the 1930s anthropologists have generally avoided directly addressing the issue of race viewing it as a social construct Challenging this tradition Peter Wade proposes that anthropologists can in fact play an important role in the study of race Wade is critical of contemporary theoretical studies of race formulated within the contexts of colonial history sociology and cultural studies Instead he argues for a new direction one which anthropology is well placed to explore Taking the study of race beyond Western notions of the individual Wade argues for new paradigms in social science in particular in the development of connections between race sex and gender An understanding of these issues within an anthropological context he contends is vital for defining personhood and identity Race is often defined by its reference to biology blood genes nature or essence Yet these concepts are often left unexamined Integrating material from the history of science science studies and anthropological studies of kinship and new reproductive technologies as well as from studies of race Peter Wade explores the

meaning of such terms and interrogates the relationship between nature and culture in ideas about race

Race in Sweden Tobias Hübinette, Catrin Lundström, Peter Wikström, 2023-05-12 Race in Sweden is an introduction to and a critical investigation of

the Swedish relationship to race in the post war and contemporary eras This relationship is fundamentally shaped by an ideology of colourblindness with any kind of race talk being taboo in public discourse and everyday language use and in practice forbidden in official and institutional language A study of a country which was until recently strikingly white but has become extremely diverse yet where the legacy of Swedish whiteness co exists with a radical colourblind antiracist ideology Race in Sweden will appeal to scholars across the social sciences and humanities with interests in race and ethnicity whiteness and Nordic studies Chapters 2 and 3 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Nature and Nurture in French Social Sciences, 1859-1914 and Beyond Martin S. Staum, 2011 The relative importance of heredity or environmental influence remains an enduring hotly debated issue while the legacy of scientific racism and sexism still tarnishes the twenty first century This unique study analyzes how theories of inherited difference including race and gender affected French social scientists in the late nineteenth and early twentieth centuries The prevailing assumption has been that French ethnographers highlighted the cultural and social environment while anthropologists emphasized the scientific study of head and body shapes Martin Staum shows that the temptation to gravitate towards one pole of the nature nurture continuum often resulted in reluctant concessions to the other side Psychologists Th odile Ribot and Alfred Binet for example were forced to recognize the importance of social factors Non Durkheimian sociologists were divided on the issue of race and gender as progressive and tolerant attitudes on race did not necessarily correlate with flexible attitudes on gender Recognizing this allows Staum to raise questions about the theory of the equivalence of all marginalized groups Anthropological institutions re organized before the First World War sometimes showed decreasing confidence in racial theory but failed to abandon it completely Staum s chilling epilogue discusses how the persistent legacy of such theories was used by extremist anthropologists outside the mainstream to deploy racial ideology as a basis of persecution in the Vichy era

Dictionary of Critical Realism Mervyn Hartwig, 2015-01-30 Dictionary of Critical Realism fulfils a vital gap in the literature Critical Realism is often criticised for being too opaque and deploying too much jargon thereby making the concepts inaccessible for a wider audience However as Hartwig puts it Just as the tools of the various skilled trades need to be precision engineered for specific interrelated functions so meta theory requires concepts honed for specific interrelated tasks it is impossible to think creatively at that level without them This Dictionary seeks to redress this problem to throw open the important contribution of Critical Realism to a wider audience for the first time by thoroughly explaining all the key concepts and key developments It includes 500 entries on these themes and has contributions from major players in field However this text does not stop there it goes further than simply elucidating the concepts and includes a number of essays which use the notions in important areas thereby demonstrating the appropriate use of the concepts in action to encourage their wider use This book will become a requisite reference tool for Critical Realist
