Handbook of Food Factory Design Christopher G. J. Baker, 2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular

Effective Inquiry for Innovative Engineering Design Ozgur Eris,2011-06-27 Effective Inquiry for Innovative Engineering Design presents empirical evidence for this claim It demonstrates a unique attribute of design thinking by identifying and characterizing a class of questions called Generative Design Questions These questions are frequently asked by designers in dialog Their use constitutes a fundamental cognitive mechanism in design thinking Their discovery stems from another finding of the work a conceptual duality between questions and decisions that is engraved deep within the design process This duality challenges a view that treats designing as decision making Decisions form the tip of the iceberg Questions keep it afloat Can an effective decision making process be performed without having high quality information Can high quality information be acquired and

generated without performing an effective inquiry process The answer to both questions is no and underscores the importance of our quest to better understand the role of inquiry in design OE Communique ,1980 **Army**
