Concerning The More Certain Fundamentals Of Astrol:

Measuring Shadows Raz Chen-Morris, 2016-03-31 In *Measuring Shadows* Raz Chen Morris demonstrates that a close study of Kepler's Optics is essential to understanding his astronomical work and his scientific epistemology. He explores Kepler's radical break from scientific and epistemological traditions and shows how the seventeenth century astronomer posited new ways to view scientific truth and knowledge. Chen Morris reveals how Kepler's ideas about the formation of images on the retina and the geometrics of the camera obscura as well as his astronomical observations advanced the argument that physical reality could only be described through artificially produced shadows, reflections and refractions. Breaking from medieval and Renaissance traditions that insisted upon direct sensory perception, Kepler advocated for instruments as mediators between the eye and physical reality and for mathematical language to describe motion. It was only through this kind of knowledge he argued that observation could produce certainty about the heavens. Not only was this conception of visibility crucial to advancing the early modern understanding of vision and the retina but it affected how people during that period approached and understood the world around them.

The Travels of Reverend Olafur Egilsson Ólafur Egilsson, 2016-07-29 The combination of Reverend Olafur's narrative, the letters and the material in the Appendices provides a first hand in depth view of early seventeenth century Europe and the Maghreb equaled by few other works dealing with the period. We are pleased to offer it to the wider audience that an English edition allows.

Numerous footnotes provide additional information and bibliographic references. A separate bibliography lists reference sources of particular importance. Two comprehensive indices containing more than 2,800 individual entries enable the reader to locate persons, publishers, topics and book and periodical titles that are mentioned in the history. The Star of the Magi Courtney Roberts, 2009-01-30 Now when Jesus was born in Bethlehem of Judea in the days of Herod the king behold there came Magi from the east to Jerusalem saying, Where is he that is born King of the Jews? For we have seen his star in the east and have come to worship him. NEW LIGHT ON AN ANCIENT MYSTERY The Star of Bethlehem is still one of the most popular and puzzling mysteries of the Bible. Its inclusion at the very beginning of the very first Gospel raises so many awkward questions for orthodox Christianity that one has to wonder how it ever made the canonical cut in the first place. So why would the authors and editors of the Christian Gospels choose Zoroastrian Magi and astrology to herald the coming of Jesus Christ? Did the Magi have some special significance then that

we have since lost After all the New Testament narrative opens with them So who were the Magi and did their astrological beliefs really lead them to Jesus Now for the first time in *The Star of the Magi* an author with a solid background in the history of astrology in ancient religion examines the Star The result is a breathtaking blend of history religious studies astronomy and astrology that tells the whole story as it has never been told before The Magi had definite expectations of a coming world savior who would be born of a virgin all mysteriously encoded and foretold in Magian astrology These ancient Persian beliefs had tremendous bearing on the development of Jewish messianic expectations they inspired early Christians and their Jewish and Persian neighbors and gave them hope in their desperate battles against the Romans Astronomy alone cannot unlock the secrets of the Star There are simply too many phenomena to choose from even astronomers concede that that we must now look to astrology for better answers **Scientists Debate Gaia** Stephen Henry Schneider,2004 Leading scientists bring the controversy over Gaia up to date by exploring a broad range of recent thinking on Gaia theory
