Sisson,2012-12-06 Scarcely a day passes without the media detailing some form of human aggression whether it be on its grandest scale in the form of war random bombings and shootings in the streets torture in a prison camp murder by gangs wife abuse resulting in the murder of the husband or the physical abuse of children sometimes resulting in their death Frequently perpetrators of human aggression when arrested and tried in court resort to a psychiatric defense But are all

such aggressors indeed appropriately psychiatric patients And if so what are their particular diagnoses and how do these relate to aggression Also of concern is aggression directed against self as evidenced in the rising incidence of suicide among young people or the self mutilation of patients suffering from certain personality disorders Both violence directed outward and aggression toward oneself pose considerable challenges to clinical management whether in the therapist's office or in the inpatient unit Although we have not been able to find successful deterrents to aggression a sizeable body of evidence does exist certainly of a descriptive nature Such data for psychiatric patients are scattered however and can be found in literatures as diverse as the biological ethological epidemiological legal philosophical psychological psychiatric and criminological Therefore given the increased frequency with which mental health professionals encounter cases of violence in their day to day work we believed it important that existing data be adduced in one comprehensive volume

Lawyers Desk Reference, 2001

Removing the Roadblocks Marsha Vannicelli, 1992-02-14 Based on the author's 18 years of experience supervising group therapists this quintessentially practical book is designed to help practitioners think through and formulate appropriate strategies in their clinical work Utilizing many clinical examples and providing explanations throughout for her interventions Vannicelli pays special attention to the therapeutic stance where the clinician positions him

or herself in relation to the patient and why and how various strategies and techniques maximize the patient's opportunity for therapeutic growth. A hallmark of Dr. Vannicelli's approach, richly illustrated in this work, is her sensitivity to countertransference and the ways it can be used productively in clinical practice. Alone among books in the substance abuse field, *REMOVING THE ROADBLOCKS* analyzes the group therapy issues that arise in the three populations most commonly seen in substance abuse clinics: substance abusers themselves, adult children of alcoholics, and other family members. The author describes characteristics unique to each population and addresses overlap among them in terms of basic procedures, formats, and hurdles that group leaders face. The book also differs from most psychotherapy texts by giving the reader an opportunity to hear the voice of an experienced therapist as she provides examples of various kinds of interventions and demonstrates how they might actually be communicated and implemented. Rather than reading about psychotherapy or about various kinds of problems, one has the sense of experiencing a thorough consultation with a truly seasoned supervisor. A particularly useful feature is the appendix at the end of the volume, which provides examples of assessment and intake questionnaires, history questionnaires, ground rules for treatment contracts, and other practical materials. Designed for all mental health professionals who work with substance abusers, the book's focus on practical clinical issues also makes it ideal for paraprofessionals. It is an excellent text for courses on substance abuse in social work, psychology, nursing, and other disciplines, as well as for courses in group psychotherapy.
