The Concise Handbook of Algebra Alexander V. Mikhalev, Gunter Pilz, 2014-01-15      **The Concise Handbook of Algebra** Aleksandr Vasil'evich Mikhalev, 2002 Provides a succinct but thorough treatment of algebra In a collection that spans about 150 sections organized in 9 chapters algebraists are provided with a standard knowledge set for their areas of expertise      **The Concise Handbook of Algebra** Alexander Mikhalev, G.F. Pilz, 2012-09-01      **New Trends in Algebras and Combinatorics** K. P. Shum, 2020      Logical, Algebraic, Analytic and Probabilistic Aspects of Triangular Norms Erich Peter Klement, Radko Mesiar, 2005-03-25 This volume gives a state of the art of triangular norms which can be used for the generalization of several mathematical concepts such as conjunction metric measure etc 16 chapters written by leading experts provide a state of the art overview of theory and applications of triangular norms and related operators in fuzzy logic measure theory probability theory and probabilistic metric spaces Key Features Complete state of the art of the importance of triangular norms in various mathematical fields 16 self contained chapters with extensive bibliographies cover both the theoretical background and many applications Chapter authors are leading authorities in their fields Triangular norms on different domains including discrete partially ordered are described Not only triangular norms but also related operators aggregation operators copulas are covered Book contains many enlightening illustrations Complete state of the art of the importance of triangular norms in various mathematical fields 16 self contained chapters with extensive bibliographies cover both the theoretical background and many applications Chapter authors are leading authorities in their fields Triangular norms on different domains including discrete partially ordered are described Not only triangular norms but also related operators aggregation operators copulas are covered Book contains many enlightening illustrations      **Progress in Commutative Algebra 1** Christopher Francisco, Lee C. Klingler, Sean Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the first of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains combinatorial and homological surveys The combinatorial papers document some of the increasing focus in commutative algebra recently on the interaction between algebra and combinatorics Specifically one can use combinatorial techniques to investigate resolutions and other algebraic structures as with the papers of Fl ystad on Boij S derburg theory of Geramita Harbourne and Migliore and of Cooper on Hilbert functions of Clark on minimal poset resolutions and of Mermin on simplicial resolutions One can also utilize algebraic invariants to understand combinatorial structures like graphs hypergraphs and simplicial complexes such as in the paper of Morey and

Villarreal on edge ideals Homological techniques have become indispensable tools for the study of noetherian rings These ideas have yielded amazing levels of interaction with other fields like algebraic topology via differential graded techniques as well as the foundations of homological algebra analysis via the study of D modules and combinatorics as described in the previous paragraph The homological articles the editors have included in this volume relate mostly to how homological techniques help us better understand rings and singularities both noetherian and non noetherian such as in the papers by Roberts Yao Hummel and Leuschke

### **Proceedings of the Third International Algebra Conference** Yuen

Fong, Long-Sheng Shiao, Efim Zelmanov, 2013-11-11 This volume contains one invited lecture which was presented by the 1994 Fields Medalist Professor E Zelmanov and twelve other papers which were presented at the Third International Conference on Algebra and Their Related Topics at Chang Jung Christian University Tainan Republic of China during the period June 26 July 1 2001 All papers in this volume have been refereed by an international referee board and we would like to express our deepest thanks to all the referees who were so helpful and punctual in submitting their reports Thanks are also due to the Promotion and Research Center of National Science Council of Republic of China and the Chang Jung Christian University for their generous financial support of this conference The spirit of this conference is a continuation of the last two International Tainan Moscow Algebra Workshop on Algebras and Their Related Topics which were held in the mid 90 s of the last century The purpose of this very conference was to give a clear picture of the recent development and research in the fields of different kinds of algebras both in Taiwan and in the rest of the world especially say Russia Europe North America and South America Thus we were hoping to enhance the possibility of future cooperation in research work among the algebraists of the five continents Here we would like to point out that this algebra gathering will constantly be held in the future in the southern part of Taiwan

### **Computer Algebra and Polynomials** Jaime Gutierrez, Josef

Schicho, Martin Weimann, 2015-01-20 Algebra and number theory have always been counted among the most beautiful mathematical areas with deep proofs and elegant results However for a long time they were not considered that important in view of the lack of real life applications This has dramatically changed nowadays we find applications of algebra and number theory frequently in our daily life This book focuses on the theory and algorithms for polynomials over various coefficient domains such as a finite field or ring The operations on polynomials in the focus are factorization composition and decomposition basis computation for modules etc Algorithms for such operations on polynomials have always been a central interest in computer algebra as it combines formal the variables and algebraic or numeric the coefficients aspects The papers presented were selected from the Workshop on Computer Algebra and Polynomials which was held in Linz at the Johann Radon Institute for Computational and Applied Mathematics RICAM during November 25 29 2013 at the occasion of the Special Semester on Applications of Algebra and Number Theory

Structural Theory of Automata, Semigroups, and Universal Algebra Valery B. Kudryavtsev, Ivo G. Rosenberg, 2006-01-18 Several of the contributions to this volume bring

forward many mutually beneficial interactions and connections between the three domains of the title Developing them was the main purpose of the NATO ASI summerschool held in Montreal in 2003 Although some connections for example between semigroups and automata were known for a long time developing them and surveying them in one volume is novel and hopefully stimulating for the future Another aspect is the emphasis on the structural theory of automata that studies ways to construct big automata from small ones The volume also has contributions on top current research or surveys in the three domains One contribution even links clones of universal algebra with the computational complexity of computer science Three contributions introduce the reader to research in the former East block
