Economical and Crack-free High-performance Concrete for Pavement and Transportation Infrastructure Construction Kamal H. Khayat, Iman Mehdipour, 2017. The main objective of this research is to develop and validate the behavior of a new class of environmentally friendly and cost-effective high-performance concrete (HPC) referred to herein as Eco HPC. The proposed project aimed at developing two classes of Eco HPC for the following applications: i) HPC for pavement construction (Eco Pave Crete) and ii) HPC for bridge infrastructure construction (Eco Bridge Crete). The binder contents for these construction materials were limited to 320 kg/m³ (540 lb/yd³) and 350 kg/m³ (590 lb/yd³) respectively in order to reduce paste content, cost, CO₂ emissions, and shrinkage. Both Eco HPC types were optimized to develop high resistance to shrinkage cracking as well as to secure high durability. Given the relatively low binder content, the binder composition and aggregate proportion were optimized based on the packing density approach to reduce the paste required to fill the voids among aggregate particles. The optimized concrete mixtures exhibited low autogenous and drying shrinkage given the low paste content and use of various shrinkage mitigating strategies. Such strategies included the use of CaO-based expansive agent EX, saturated lightweight sand (LWS) as well as synthetic or recycled steel fibers. Proper substitution of cement by supplementary cementitious materials (SCMs) resulted in greater packing density of solid particles, lower water superplasticizer demand, and improved rheological and hardened properties of cement-based materials. A statistical mix design method was proposed and was shown to be effective in optimizing the aggregate proportioning to achieve maximum packing density. The synergistic effect between EX with LWS resulted in lower autogenous and drying shrinkage. For a given fiber content, the use of steel fibers recovered from waste tires had twice the flexural toughness of similar mixture with synthetic fibers. The optimized Eco HPC mixtures had lower drying shrinkage of 300 micro strain after 250 days. The risk of restrained shrinkage cracking was found to be low for the optimized concrete mixtures; no cracking even after 55 days of testing. The results of structural performance of large-scale reinforced concrete beams indicated that the optimized Eco Bridge Crete containing ternary combination of 35% fly ash and 20% slag replacements and recycled steel fibers developed significantly higher flexural toughness compared to the MoDOT reference mixture used for bridge infrastructure applications.

Fiber Reinforced Concrete for Improved Performance of Transportation Infrastructure Anna C. Birely,Philip Park,Joshua A. McMahon,Xijun Shi,Younho Rew,2018 Steel fiber reinforced concrete SFRC provides improved tensile performance of concrete This improved performance can be used in slabs to reduce the volume of conventional steel reinforcement create longer spans or reduce slab thickness This can lead to a reduction in structure weight and improvements in the safety and speed of construction These benefits can result in cost savings in both the short term

construction labor and the long term improved quality and durability To maximize the benefits of SFRC it is necessary to establish optimal mix designs identify target projects for implementation and validate design procedures for SFRC This project investigated the application of SFRC in pavements and bridge decks to reduce the amount of traditional steel used and to improve service level performance The project consisted of four main tasks The first was a review of the literature on SFRC applications to elevated slabs and slabs on grade This was followed by case studies on implementation of SFRC for pavement and bridge decks Results of the case studies informed the development of an experimental test program Finally all results were compiled to develop design recommendations and an implementation plan This report summarizes the project findings and provides recommendations for the implementation of SFRC in Arizona Department of Transportation infrastructure
