Business Process Modelling Bernd Scholz-Reiter, Eberhard Stickel, 2012-12-06 Today information is considered to be a valuable company resource that has to be planned coordinated and documented Business processes need to be treated in the same way Moreover significant potential for improvement may lie in optimizing these processes As a consequence information should be collected and suitably modelled and business processes need to be analyzed and redesigned Business modelling usually deals with different views of a company The data view is concerned with information structures the functional view analyzes tasks and procedures the process view links different functions by analyzing workflows and events triggering them while the organizational view is concerned with the structure of the company under investigation These views should not however be treated in an isolated manner The key to success is to deal with the interaction between them Hence business modelling should provide an integrated view of all relevant informational functional organizational and workflow issues One of the most significant problems results from the complexity of the modelling task Modelling tools are required and are to be used in combination with other close methodologies and applications Suitable generalizations and or
