High Temperature, 1987 **Thermohydrodynamic Models of Laser Irradiation of Metals** R. V. Arutyunian, 1990 Thermohydrodynamic models of laser irradiation of metals examines models of continuous and recurrent pulse irradiation under conditions of dimensional and thermochemical treatment Hydrodynamic mechanisms of melt displacement under conditions of dimensional and thermochemical treatment Hydrodynamic mechanisms of melt displacement under conditions of laser drilling are discussed and the space time structure of temperature in metal under the effect of a moving recurrent pulse heat source is studied analytically and numerically A thermo hydrodynamic model of the welding process is analyzed and the two dimensional problem of the heating of metal and melt motion under vapour pressure and surface tension is modelled numerically Convective stirring of an admixture under the effect of pulsed laser radiation is considered and numerically investigated

Introduction to Physics of Elementary Particles Oleg Mikhailovich Boyarkin, 2007 In this textbook all known fundamental interactions are considered and the main directions of their unification are reviewed The basic theoretical ideas and experiments which permit establishing a quark lepton level of matter structure are discussed A general scheme for the theory of interacting fields with the help of the local gauge invariance principle is given This scheme is used for presentation of the basic aspects of the quantum chromodynamics and electroweak theory of Weinberg Salam Glashow Principles of operation and designs of accelerators neutrino telescopes and elementary particle detectors are considered The modern theory of the Universe evolution is described

,1991 Atomic and Molecular Radiative Processes Vladimir Krainov, Boris M. Smirnov, 2019-07-03 This book describes selected problems in contemporary spectroscopy in the context of quantum mechanics and statistical physics. It focuses on elementary radiative processes involving atomic particles, atoms, molecules, ions, which include radiative transitions between discrete atomic states, the photoionization of atoms, photorecombination of electrons and ions, bremsstrahlung, photodissociation of molecules, and photoattachment of electrons to atoms. In addition to these processes, the transport of resonant radiation in atomic gases and propagation of infrared radiation in molecular gases are also considered. The book subsequently addresses applied problems such as optical pumping, cooling of gases via laser resonance radiation, light-induced drift of gas atoms, photoresonant plasma reflection of radio waves from the ionosphere, and detection of submillimeter radiation using Rydberg atoms. Lastly, topical examples in atmospheric and climate change science are presented, such as lightning channel glowing, emission of the solar photosphere, and the greenhouse phenomenon in the atmospheres of the Earth and Venus. Along with researchers, both graduate and undergraduate students in atomic, molecular, and atmospheric physics will find this book a useful and timely guide.

Advanced Particle Physics Oleg Boyarkin, 2011-02-16 Helping readers understand the complicated laws of nature, *Advanced Particle Physics Volume I: Particles, Fields, and Quantum Electrodynamics* explains the calculations, experimental procedures, and measuring methods of particle physics. It also describes modern physics devices, including accelerators, elementary particle detectors, and neutrino telescopes. The book first introduces the mathematical basis of modern quantum field theory. It presents the most pertinent information on group theory, proves Noether's theorem, and determines the major motion integrals connected with both space and internal symmetry. The second part on fundamental interactions and their unifications discusses the main theoretical preconditions and experiments that allow for matter structure to be established at the quark-lepton level. In the third part, the author investigates the secondary quantized theories of free fields with spin 0, 1/2, and 1, with particular emphasis on the neutrino field. The final part focuses on quantum electrodynamics, the first successfully operating quantum field theory. Along with different renormalization schemes of quantum field theory, the author covers the calculation methods for polarized and unpolarized particles with and without inclusion of radiative corrections. Each part in this volume contains problems to help readers master the calculation techniques and generalize the results obtained. To improve understanding of the computation procedures in quantum field theory, the majority of the calculations have been
