

WATER ESSENTIALS HANDBOOK: CORROSION, SCALE, AND BIOFOULING CONTROL IN COOLING SYSTEMS

Introduction to Corrosion, Scale, and Biofouling Control in Cooling Systems

The previous chapter outlined fundamentals of cooling tower and heat exchanger design/operation. In this chapter, we examine cooling water chemistry and treatment programs to maintain reliability throughout the cooling water network.

Cooling systems require protection from corrosion, scaling, and biofouling (or microbiological fouling) to maximize performance. A symbolic representation of these issues and their interdependence is shown below.

Figure 7.1. The corrosion-deposition-biofouling triangle.

Corrosion, scale, and biofouling control must be considered in a holistic manner. A fourth, increasingly important factor is the potential environmental impact of water treatment chemistry, especially regarding chemicals that could appear in the plant discharge. Treatment programs that were once commonplace may no longer be allowed or may be severely restricted due to discharge regulations.

While treatment methods often have several functions, a key aspect is protection of metal surfaces. In the next sections, we review the most common corrosion mechanisms and control methods.

Condenser Biofouling Control John F. Garey, 1980 *Proceedings*, 1985 **Fouling Organisms of the Indian Ocean** Rachakonda Nagabhushanam, 2020-08-14 Marine fouling organisms attach permanently to ship hulls and underwater parts of offshore structures All maritime nations spend millions even billions of dollars to get rid of them Believing that a pooling of knowledge of all aspects of the basic biology of fouling organisms and a re examination of control technology methods are steps needed for the solution of this problem the aim of the book is to highlight recent advances in fouling control technology and at the same time provide basic information on the biology of fouling organisms found in the Indian Ocean The book begins by presenting an overview of research done in India on the marine fouling organisms and wood borers of the Indian Ocean It then moves through chapters dealing with the succession of fouling communities chemical cues in larval settlement epibiosis methods of fouling prevention functional morphology and distribution of foulers in Indian waters Condenser Biofouling Control , **Proceedings, Second International Conference on Fixed-Film Biological Processes, July 10-12, 1984, Arlington, Virginia** , 1985 *Proceedings of the 6th Ocean Thermal Energy Conversion Conference* , 1979 **Proceedings of the Ocean Thermal Conversion (OTEC) Biofouling and Corrosion Symposium, October 10-12, 1977, Seattle, Washington** , 1978 **Operational and Environmental Consequences of Large Industrial Cooling Water Systems** Sanjeevi Rajagopal, Henk A. Jenner, Vayalam P. Venugopalan, 2012-01-07 The use of water for industrial purposes is of foremost importance It is used as a coolant and industrial activities dealing with power generation steel and iron paper and pulp and oil require very large amounts of water The industry therefore resorts to large scale abstraction of water from natural water bodies This water is often treated with chemicals to combat operational problems like biofouling and corrosion Such withdrawal and subsequent discharge of large amounts of water have the potential to impart significant impact on the recipient water body The organisms drawn along with the cooling water as well as those residing at the discharge zone are subjected to a combination of mechanical thermal and chemical stress on a continuous basis *Ecology of Estuaries* Michael J. Kennish, 1991-11-19 Ecology of Estuaries represents the most definitive and comprehensive source of reference information available on the human impact on estuarine ecosystems The volume discusses both acute and insidious pollution problems plaguing these coastal ecotones It also provides a detailed examination of the deleterious and pervasive effects of human activities on biotic communities and sensitive habitat areas in estuaries Specific areas covered include organic loading oil pollution polynuclear aromatic hydrocarbons chlorinated hydrocarbons heavy metals dredging and dredged spoil disposal radionuclides as well as other contaminants and processes The diverse components of these anthropogenic influences are assembled in an organized framework and presented in a clear and concise style that facilitates their understanding Energy Research Abstracts , 1986 **Proceedings - Offshore Technology Conference** , 1982 **Controlling Zebra Mussels at Water Treatment Plant Intakes** , 1997 **WATER CHLORINATION**
