Conditions on Rules Ger de Haan,2017-04-10 No detailed description available for Conditions on Rules   On the Formal Syntax of the Westgermania Werner Abraham,1983-01-01 It has often been noted that Dutch and Frisian reflects a particular stage of development between German and English Phonologically syntactically and morphologically Dutch and German are closely related languages Yet there remain sufficient morphosyntactic differences in terms of language development The contributions of this collection focus on the relationships and differences of these neighbouring West Germanic languages

Neeleman,F. Weerman,2012-12-06 Most linguistic theories assume that each grammatical relation is established in a unique structural configuration Neeleman and Weerman take issue with this view arguing for a more flexible approach on the basis of conceptual considerations and data taken mostly but not exclusively from the Germanic languages In depth analyses of word order phenomena as well as diachronic and typological generalizations motivate a re evaluation of the role of case in the projection of arguments Case is shown to provide a syntactic foothold for thematic interpretation something which is necessary in a grammar that does not allow fixed theta positions Thus this study does not only offer a genuine alternative to many standard assumptions it also explains why there should be such a thing as case in natural language

Directionality and Logical Form Josef Bayer,2013-06-29 Directionality and Logical Form provides a detailed treatment of the syntax of focusing particles such as only and even in a cross linguistic perspective The derivation of logical forms is shown to be under the control not only of the ECP and subjacency but also of directionality of government and the particular word order parameter that holds in a given language head final languages systematically disallow certain derivations or readings that are available in head initial languages The reason is that heads that deviate in their selection properties from canonical head finality project a directionality barrier Various strategies are explored by which this barrier can be circumvented Although the theory is developed mainly on the basis of the head position in German it can be directly used to explain constraints on the scope of Wh in situ in Bengali and closely related languages Audience Syntacticians and semanticists interested in parametric variation as well as linguists working on Germanic and or Indo Aryan languages

Grammar in Progress Joan Mascaró,Marina Nespor,2010-10-06 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century This branch of linguistics broadly known as Generative Grammar is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the language organ The series comprises high quality monographs and collected volumes that address such issues The topics in this series range from phonology to semantics from syntax to information structure from mathematical linguistics to studies of the lexicon   **Bibliography of Semiotics, 1975-1985**

Haider,S. Olsen,S. Vikner,2013-03-09 o COMPARATIVE GERMANIC SYNTAX This volume contains 13 papers that were prepared for the Seventh Workshop on Comparative Germanie Syntax at the University of Stuttgart in November 1991 In defining the theme both of the workshop and of this volume we have taken comparative in comparative Germanic syntax to mean that at least two languages should be analyzed and Germanic to mean that at least one of these languages should be Germanic There was no require ment as such that the research presented should be situated within the framework known as Principles and Parameters Theory previously known as Government and Binding Theory though it probably is no accident that this nevertheless turned out to be the case Within this theory it is seen as highly desirable to be able to account for several differences on the surface by deriving them from fewer under lying differences The reason is that in order to explain the ease with which children acquire language it is assumed that not all knowledge of any given language is the result of learning but that instead children already possess part of this knowledge at birth the innate part of linguistic knowledge will obviously be the same for all human beings and thus this theory also provides an explanation of language universals The fewer real i e
