Progress in Commutative Algebra 1** Christopher Francisco, Lee C. Klingler, Sean Sather-Wagstaff, Janet C.

Vassilev, 2012-04-26 This is the first of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University. The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non-Noetherian commutative algebra. These volumes present current trends in two of the most active areas of commutative algebra: non-Noetherian rings, factorization, ideal theory, integrality, and Noetherian rings, the local theory, graded situation, and interactions with combinatorics and geometry. This volume contains combinatorial and homological surveys. The combinatorial papers document some of the increasing focus in commutative algebra recently on the interaction between algebra and combinatorics. Specifically, one can use combinatorial techniques to investigate resolutions and other algebraic structures, as with the papers of Fløystad on Boij-Söderberg theory of Gorenstein Harbourne and Migliore, and of Cooper on Hilbert functions of Clark on minimal poset resolutions, and of Mermin on simplicial resolutions. One can also utilize algebraic invariants to understand combinatorial structures like graphs, hypergraphs, and simplicial complexes, such as in the paper of Morey and Villarreal on edge ideals. Homological techniques have become indispensable tools for the study of Noetherian rings. These ideas have yielded amazing levels of interaction with other fields like algebraic topology via differential graded techniques, as well as the foundations of homological algebra analysis via the study of D-modules and combinatorics as described in the previous paragraph. The homological articles the editors have included in this volume relate mostly to how homological techniques help us better understand rings and singularities, both Noetherian and non-Noetherian, such as in the papers by Roberts, Yao, Hummel, and Leuschke. Commutative Algebra Marco Fontana, Sophie Frisch, Sarah

Glaz, 2014-07-15 This volume presents a multi-dimensional collection of articles highlighting recent developments in commutative algebra. It also includes an extensive bibliography and lists a substantial number of open problems that point to future directions of research in the represented subfields. The contributions cover areas in commutative algebra that have flourished in the last few decades and are not yet well represented in book form. Highlighted topics and research methods include Noetherian and non-Noetherian ring theory, as well as integer-valued polynomials and functions. Specific topics include Homological dimensions of Prüfer-like rings, Quasi-complete rings, Total graphs of rings, Properties of prime ideals over various rings, Bases for integer-valued polynomials, Boolean subrings, The portable property of domains, Probabilistic topics in Integral Domains, Closure operations in Zariski-Riemann spaces of valuation domains, Stability of domains, Non-Noetherian grade, Homotopy in integer-valued polynomials, Localizations of global properties of rings, Topics in integral closure, Monoids and submonoids of domains. The book includes twenty articles written by many of the most prominent researchers in the field. Most contributions are authored by attendees of the conference in commutative algebra held at the Graz University of

Technology in December 2012 There is also a small collection of invited articles authored by those who did not attend the conference Following the model of the Graz conference the volume contains a number of comprehensive survey articles along with related research articles featuring recent results that have not yet been published elsewhere

Ring and Module Theory Toma Albu, Gary F. Birkenmeier, Ali Erdogan, Adnan Tercan, 2011-02-04 This book is a collection of invited papers and articles many presented at the 2008 International Conference on Ring and Module Theory The papers explore the latest in various areas of algebra including ring theory module theory and commutative algebra

Commutative Algebra Joseph Brennan, Aron Simis, 2025-09-22 Wolmer Vasconcelos was one of the giants in the development of Commutative Algebra in the latter half of the twentieth century and the first decades of the twenty first century This work collects in one place essays illustrating the important developments of his work particularly in commutative algebra that permits the reader to see the development of his important ideas and how they influence the development of mathematics today
