Conference Room K Deep Thoughts From The Mind Of:

It Begins Thom L. Nichols, 2010-05-18 When he traded a bottle of tequila for a girl he didn't expect to fall in love with her. Unfortunately, she has a mechanical problem. Finding out about her problem as he is being arrested by the military police, K bar learns that they think he's an alien. Since Melody can't register on anything mechanical, they think that she's one too. While K bar and Melody are helping a real alien, the United States falls under crisis. A presidential scandal incites an international incident. When K bar returns to Earth, everything is in chaos. Something has to be done. Using a bit of magic and a bit of technology, K bar comes up with a plan. To initiate his plan, K bar has to become the President of the United States. He also has to battle a cyborg bounty hunter, stop an assassination, destroy the government, uncover a conspiracy, and completely end taxation.

Recent Practice and Theory Milton Wolpin, 2013-11-11 In this volume are papers selected from the 1982 Annual Conference of the American Association for the Study of Mental Imagery as well as several others that were later invited. This conference, a yearly one, was held at the University of Southern California. Participants and invited speakers come from around the country and present current material on the status of theory, research, and practice involving imagery. These conferences began in 1979 and typically have attracted two hundred or more persons. In the opening paper by Paul Bakan, we have a discussion of imagery from an historical perspective. He traces the various attitudes toward imagery starting with biblical times and argues that the behaviorist revolution and its antagonism towards imagery were likely reflective of more than a negative attitude toward imagery as a consequence of its being associated with consciousness and mentalistic concepts. We have apparently been ambivalent towards imagery over the millennia. He closes with some suggestions of how we may more happily resolve this situation.

Space, Time and Number in the Brain Stanislas Dehaene, Elizabeth Brannon, 2011-07-13 The study of mathematical cognition and the ways in which the ideas of space, time, and number are encoded in brain circuitry has become a fundamental issue for neuroscience. How such encoding differs across cultures and educational level is of further interest in education and neuropsychology. This rapidly expanding field of research is overdue for an interdisciplinary volume such as this, which deals with the neurological and psychological foundations of human numeric capacity. A uniquely integrative work, this volume provides a much needed compilation of primary source material to researchers from basic neuroscience, psychology, developmental science, neuroimaging, neuropsychology, and theoretical biology. The first comprehensive and authoritative volume dealing with neurological and psychological foundations of mathematical cognition. Uniquely integrative volume at the frontier of a rapidly expanding interdisciplinary field. Features outstanding and truly international scholarship with chapters written by leading experts in a variety of fields.
