Hannan, 1991 **Handbook of Research Methods and Applications in Spatially Integrated Social Science** Robert Stimson, 2014-07-31 The chapters in this book provide coverage of the theoretical underpinnings and methodologies that typify research using a Spatially Integrated Social Science SISS approach This insightful Handbook is intended chiefly as a primer for students and bu **Applied Regression Models in the Social Sciences** Dudley L. Poston, Jr, Eugenia Conde, Layton M. Field, 2023-08-17 This accessible and practical textbook gives students the perfect guide to the use of regression models in testing and evaluating hypotheses dealing with social relationships A range of statistical methods suited to a wide variety of dependent variables is explained which will allow students to read understand and interpret complex statistical analyses of social data Each chapter contains example applications using relevant statistical methods in both Stata and R giving students direct experience of applying their knowledge A full suite of online resources including statistical command files datasets and results files homework assignments class discussion topics PowerPoint slides and exam questions supports the student to work independently with the data and the instructor to deliver the most effective possible course This is the ideal textbook for advanced undergraduate and beginning graduate students taking courses in applied social statistics **Causal Models in the Social Sciences** H.M. Blalock Jr., 2017-07-28 Causal models are formal theories stating the relationships between precisely defined variables and have become an indispensable tool of the social scientist This collection of articles is a course book on the causal modeling approach to theory construction and data analysis H M Blalock Jr summarizes the then current developments in causal model utilization in sociology political science economics and other disciplines This book provides a comprehensive multidisciplinary picture of the work on causal models It seeks to address the problem of measurement in the social sciences and to link theory and research through the development of causal models Organized into five sections Simple Recursive Models Path Analysis Simultaneous Equations Techniques The Causal Approach to Measurement Error and Other Complications this volume contains twenty seven articles eight of which were specially commissioned Each section begins with an introduction explaining the concepts to be covered in the section and links them to the larger subject It provides a general overview of the theory and application of causal modeling Blalock argues for the development of theoretical models that can be operationalized and provide verifiable predictions Many of the discussions of this subject that occur in other literature are too technical for most social scientists and other scholars who lack a strong background in mathematics This book attempts to integrate a few of the less technical papers written by econometricians such as Koopmans Wold Strotz and Fisher with discussions of causal approaches in the social and biological sciences This classic text by Blalock is a valuable source of material for those interested in the issue of measurement in the social sciences and the construction of

mathematical models **Crossroads of Social Science** Heinz Eulau,1989 The essays in this collection analyze the successes and failures of the social sciences over the last few decades as well as on their future The focus of the book is on generic problems difficulties and dilemmas in the social sciences that the contributors are uniquely qualified to articulate Each of them has been intimately involved in the development of one or another discipline in the last thirty years or so each has made significant contributions to that development in many ways each has a personal perspective on accomplishments and failures promises and needs continuities to be cultivated and opportunities to be seized anyone concerned with the state of social science disciplines should find these essays of interest Journal of Politics **A Solution to the Ecological Inference Problem** Gary King,2013-09-20 This book provides a solution to the ecological inference problem which has plagued users of statistical methods for over seventy five years How can researchers reliably infer individual level behavior from aggregate ecological data In political science this question arises when individual level surveys are unavailable for instance local or comparative electoral politics unreliable racial politics insufficient political geography or infeasible political history This ecological inference problem also confronts researchers in numerous areas of major significance in public policy and other academic disciplines ranging from epidemiology and marketing to sociology and quantitative history Although many have attempted to make such cross level inferences scholars agree that all existing methods yield very inaccurate conclusions about the world In this volume Gary King lays out a unique and reliable solution to this venerable problem King begins with a qualitative overview readable even by those without a statistical background He then unifies the apparently diverse findings in the methodological literature so that only one aggregation problem remains to be solved He then presents his solution as well as empirical evaluations of the solution that include over 16 000 comparisons of his estimates from real aggregate data to the known individual level answer The method works in practice King s solution to the ecological inference problem will enable empirical researchers to investigate substantive questions that have heretofore proved unanswerable and move forward fields of inquiry in which progress has been stifled by this problem **The Reviewer's Guide to Quantitative Methods in the Social Sciences** Gregory R. Hancock,Ralph O. Mueller,Laura M. Stapleton,2010-04-26 Designed for reviewers of research manuscripts and proposals in the social and behavioral sciences and beyond this title includes chapters that address traditional and emerging quantitative methods of data analysis *Systems Methodology in Social Science Research* R. Cavallo,2013-06-29 From the beginning the systems research movement has shown a high potential for offering a conceptual framework for the understanding of social systems Much of this potential has been realized but a major gap remains with regard to operational investigative aids Developments of the last ten years with a method ological orientation and emphasis seem finally to be filling this gap The purpose of this book is to describe the most advanced of these developments and to make them available to a wider audience The emphasis is on developments that are primarily oriented toward interaction with expertise in the social sciences and that thus hold the most promise for social

systems investigation In particular attempts have been made to provide substantiation and illustration of three main points 1 the common motivation and essential integrability that systems research provides for developments and considerations along a very broad spectrum of interests 2 the very diverse nature of the types and forms of considerations that may be meaningfully integrated and 3 the operational and usable nature that developments in systems methodology represent for research in the social sciences The book is divided into three parts with a generally increasing degree of specificity The first part Chapters 1 2 and 3 deals with foundational issues associated with modeling and methodology as areas worthy of study in their own right

Computer Applications in the Social Sciences Edward E. Brent, Ronald E. Anderson, 1990 Presenting an introduction to computing and advice on computer applications this book examines hardware and software with respect to the needs of the social scientist It offers a framework for the use of computers with focus on the work station the center of which is a personal computer connected to networks by a telephone based modem

Future Worlds of Social Science Lawrence Hazelrigg, 2023-11-25 What are the possible future worlds of social science How do these prospects compare with recent conclusions that social science is generally a non factor in policy debates and irrelevant to the lives of a host of real world people as a well known sociologist reported in the centennial volume of the American Sociological Association This substantial study covers history art and aesthetics identity and the self in seeking an answer to the question of Future Worlds

The Importance of Common Metrics for Advancing Social Science Theory and Research National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Social Science Evidence for Use, Committee on Advancing Social Science Theory: The Importance of Common Metrics, 2011-04-17 In February 2010 the National Research Council convened a workshop to investigate the feasibility of developing well grounded common metrics to advance behavioral and social science research both in terms of advancing the development of theory and increasing the utility of research for policy and practice The Workshop on Advancing Social Science Theory The Importance of Common

Metrics had three goals To examine the benefits and costs involved in moving from metric diversity to greater standardization both in terms of advancing the development of theory and increasing the utility of research for policy and practice To consider whether a set of criteria can be developed for understanding when the measurement of a particular construct is ready to be standardized To explore how the research community can foster a move toward standardization when it appears warranted This book is a summary of the two days of presentations and discussions that took place during the workshop

Forecasting in the Social and Natural Sciences Kenneth C. Land,Stephen H. Schneider,2012-12-06 Social and natural scientists often are called upon to produce or participate in the production of forecasts This volume assembles essays that describe the organizational and political context of applied forecasting b review the state of the art for many forecasting models and methods and c discuss issues of predictability the implications of forecast errors and model construction linkage and verification The essays should be of particular interest to social and natural scientists concerned with forecasting large scale systems This project had its origins in discussions of social forecasts and forecasting methodologies initiated a few years ago by several social and natural science members of the Social Science Research Council's Committee on Social Indicators It became apparent in these discussions that certain similar problems were confronted in forecasting large scale systems be they social or natural In response the Committee hypothesized that much could be learned through more extended and systematic interchanges among social and natural scientists focusing on the formal methodologies applied in forecasting To put this conjecture to the test the Committee sponsored a conference at the National Center for Atmospheric Research in Boulder Colorado on June 10-13 1984 on forecasting in the social and natural sciences The conference was co chaired by Committee members Kenneth C Land and Stephen H Schneider representing respectively the social and natural science membership of the Committee Support for the conference was provided by a grant to the Council from the Division of Social and Economic Science of the National Science Foundation
