Nagel, Kenneth Preiss, 1995 Identifying the new industrial revolution the authors present a vision for cooperating to compete in today's rapidly changing business world Nagel Goldman and Preiss show exactly why mass production is a thing of the past and why customized products are the key to business survival

Agile Competitors and Virtual Organizations Steven L....[Et Al.] Goldman, Practical Information Policies Elizabeth Orna, 1999 This book makes information management relevant and understandable It provides guidance for what we should do and how we should do it in response to the key question Why are information and knowledge increasingly viewed as critical resources for successful organizations and their leaders The author presents useful frameworks approaches and cases to turn information into action for general managers as well as information specialists book jacket

Virtual Organizations Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Martin Ollus, 2006-06-18 The area of Virtual Organizations as a main component of the new discipline of Collaborative Networks has been the focus of research globally The fast evolution of the information and communication technologies and in particular the so called Internet technologies also represents an important motivator for the emergence of new forms of collaboration However the research in many of these cases is highly fragmented considering that each project is focused on solving specific problems As such there is no effective consolidation harmonization among them in order to have an effective impact and facilitate the interaction among the involved experts This book represents a contribution to the consolidation of the already vast amount of empirical knowledge and practical experience A synthesis of results collected from the analysis of numerous projects and industry case studies is presented with focus on Principles and models ICT infrastructures and tools Implementation issues and Case studies

Prometheus Wired Darin Barney, 2011-11-01 From all sides we hear that computer technology with its undeniable power to disseminate information and connect individuals holds enormous potential for a reinvigoration of political life But will the Internet really spark a democratic revolution And will the changes it brings be so profound that past political thought will be of little use in helping us to understand them In Prometheus Wired Darin Barney debunks claims that a networked society will provide the infrastructure for a political revolution and shows that the resources we need for understanding and making sound judgments about this new technology are surprisingly close at hand By looking to thinkers who grappled with the relationship of society and technology such as Plato Aristotle Marx and Heidegger Barney critically examines such assertions about the character of digital networks Along the way Barney offers an eye opening history of digital networks and then explores a wide range of contemporary issues such as electronic commerce telecommuting privacy virtual community digital surveillance and the possibility of sovereign governance in an age of global networks Ultimately Barney argues that instead of placing power back in the hands of the public a networked economy seems to exacerbate the worst features of industrial capitalism and in terms of the surveillance and control it exerts reduces our political freedom Of

vital interest to politicians communicators and anyone concerned about the future of democracy in the digital age Prometheus Wired adds a provocative new voice to the debate swirling around the Net and the ways in which it will or will not change our political lives

E-Business and Virtual Enterprises Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Ricardo J. Rabelo, 2013-06-29 The fast progress in computer networks and their wide availability complemented with on one hand the explosion of the mobile computing and on the other hand the trends in the direction of ubiquitous computing act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices The first efforts in virtual enterprises VE were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises Even pilot projects that were focused on specific business domains were forced to first develop some basic infrastructures before being able to develop their specific business models Nowadays although there is still a need to consolidate and standardize the horizontal infrastructures the focus is more and more directed to the development of new vertical business models and the corresponding support tools At the same time in the earlier R D projects the attention was almost exclusively devoted to the operation phase of the VE life cycle while now there are more activities addressing the creation phase developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities In order to complete the life cycle there is a need to also invest on support for VE dissolution
