Aging And Adult Development In The Developing World:

Aging and Adult Development in the Developing World Frank E. Eyetsemitan, James T. Gire, 2003-02-28 Most studies of human development in developing societies have focused on the childhood stage and in a few cases exploration has extended up to adolescence since this age group represents about half the population in developing societies The developed world however is experiencing a surge in the elderly population and this has spurred its study There is growing recognition that studies are needed in order to understand aging in all contexts and to discover how the experience may differ in developing and developed societies In this book the authors discuss the appropriateness or inappropriateness of applying Western theories and perspectives to studies of aging in the developing world The present study critically examines the major theories in the area of aging and adult development covering such domains as the physical psychological and social aspects of aging death and dying and social and public policies Applying the concepts of individualism and collectivism as well as the global and environmental dimensions of the developing world the authors have earmarked the theories that seem suitable only to the developed world and those that appear to be universally relevant

Perspectives on the Future of the Sociology of Aging Panel on New Directions in Social Demography, Social Epidemiology, and the Sociology of Aging,Committee on Population,Division of Behavioral and Social Sciences and Education,National Research Council,2013-02-14 The population of the United States is growing inexorably older With birth rates historically low and life expectancy continuing to rise the age distribution of the population in the United States is growing steadily older This demographic shift is occurring at a time of major economic and social changes which have important implications for the growing elderly population Other changes such as the move away from defined benefit toward

defined contribution retirement plans changes in some corporate and municipal pension plans as a result of market pressures and the 2008 financial crisis precipitated by the crash of the housing market all have economic implications for older people. They are also likely to make it more difficult for certain groups of future retirees to find their retirements at the level that they had planned and would like. To deal effectively with the challenges created by population aging it is vital to first understand these demographic economic and social changes and to the extent possible their causes consequences and implications. Sociology offers a knowledge base a number of useful analytic approaches and tools and unique theoretical perspectives that can be important aids to this task. The Panel on New Directions in Social Demography Social Epidemiology and the Sociology of Aging was established in August 2010 under the auspices of the Committee on Population of the National Research Council to prepare a report that evaluates the recent contributions of social demography social epidemiology and sociology to the study of aging and seeks to identify promising new research in these fields. Perspectives on the Future of the Sociology of Aging provides candid and critical comments that will assist the institution in making the final published volume as sound as possible and to ensure that the volume meets institutional standards for objectivity evidence and responsiveness to the study charge.

Population and Health in Developing Countries Maryse Gaimard, 2013-07-26 This book provides an overview of the health of developing nations in the early twenty first century The basic assumption is that the health of a population is not independent of broader demographic trends and does follow the health transition model The coverage is broad ranging from health transition in developing countries to the health of women to an analysis of morbidity Population health is an essential component of human and social development As both a means and an end of development health lies at the heart of underdevelopment and ranks first on the list of international priorities The WHO slogan Health for all in 2000 reflects the spirit of a more general movement in favor of health promotion throughout the world But the developing world is far from reaching this aim The health of populations has improved in developing regions but there are still deep inequalities and serious problems remain especially in Sub Saharan Africa After reviewing the core concepts of population health the book examines health transition in developing countries a process that has resulted in a double burden of diseases A discussion of mortality in developing countries serves to highlight the high rates of child mortality in these regions The book devotes a full chapter to women s health and its chapter length analysis of morbidity highlights the double burden weighing down developing populations and concludes with an analysis of health systems in developing countries *Thesaurus of ERIC Descriptors*, 1984 [The Wiley-Blackwell Handbook of Adulthood and Aging](#) Susan K.
