Air Pollution Science for the 21st Century J. Austin, P. Brimblecombe, W.T. Sturges, 2002-10-31 Acid rain photochemistry long range transport of pollutants greenhouse gas emissions and aerosols have dominated tropospheric air pollution for the last 30 years of the 20th century At the start of the 21st century acid rain is subject to planned improvement in Europe and North America but is still a growing problem in Asia Tropospheric ozone is understood much better but the problem is still with us and desirable levels are difficult to achieve over continental Europe The heterogeneous chemistry that is responsible for ozone depletion in the stratosphere is now reasonably clear but there is on going interest in the sources and sinks of CFC chlorofluorocarbon replacements in the troposphere There is also increasing interest in indoor air quality and the origin and health implications of atmospheric particles Perhaps most important on a global perspective intensive research has not yet determined the relationship between greenhouse gases aerosols and surface temperature The climatic implications of these are now more urgent than ever This book the first in the Developments in Environmental Science series consists of a collection of authoritative reviews and essays on the science and application of air pollution research at the start of this new century

Air Pollution Processes in Regional Scale Dimitrios Melas, Dimiter Syrakov, 2003-11-30 An understanding of long range transport of air pollutants in the atmosphere requires a knowledge of the relevant atmospheric dynamic and chemical processes active at the regional scale as well as the temporal and spatial distribution of emissions Numerical modeling is the most efficient way to determine the atmospheric transport photochemistry and deposition pathways The book therefore discusses the physical and chemical processes that determine regional air pollution and presents the relevant modeling techniques to describe the different atmospheric processes that are active at that scale

Criteria Air Pollutants and their Impact on Environmental Health Pallavi Saxena, Saurabh Sonwani, 2019-11-14 Air pollution is a global hazard Majority of the world's population is affected by air pollution Contamination of air is no more an only an atmospheric problem but now has become a health concern too Under the Clean Air Act of 1971 a set of air pollutants are designated as criteria pollutants These are suspected to be strongly harming the public health and the environment as compared to other primary and secondary pollutants Globally this category of air pollutants has been given less attention only few studies have been reported in this area This book begins with a short background on criteria air pollutants and their sources sinks and chemistry The chapters explore the detailed nature of primary pollutants criteria pollutants such as nitrogen dioxide sulphur dioxide carbon monoxide particulate matter and lead Their reaction mechanisms climate change potency environmental health effects on plants and human life are discussed The book also covers secondary pollutants such as ozone The book discusses ozone chemistry and its environmental health effects This book act as a valuable tool for students in Environmental Science Biological Science and Agriculture as well as environmental consultants and professionals involved in air quality research and the application of air quality guidelines and advice

Air Pollution , Air Pollution and Health R M

Harrison, R E Hester, 2007-10-31 The impact of air pollution on human health is currently of international concern A comprehensive review of the subject is given in this volume which complements the previous title covering air quality management Dealing with the common gaseous and particulate air pollutants including chemical carcinogens it reviews the epidemiological and exposure chamber study research as well as considering mechanistic studies in the case of particulate matter Air Pollution and Health also addresses the practical issue of setting standards for human exposure to air pollution by including the philosophy of standard setting and a review of currently available standards along with a description of the setting of USEPA revised standards for ozone and particulate matter Current knowledge of indoor air pollution is also discussed As with all other books in the series this volume will be of interest to the general public as well as being an important reference source for all those involved in the field be it as student industrialist government agent or health professional

Air Pollution Control Gordon M. Bragg, Werner Strauss, 1971

Environmental Pollution Studies Gerald Arthur Best, Gerry Best, 1999-01-01 This book examines a number of important contemporary environmental issues in an informative and easy to read style The topics covered include sewage treatment eutrophication air pollution acid rain global warming and pollution from farming A particularly valuable section of the book describes a range of tests that can be carried out on various environmental parameters The procedures require relatively simple equipment and they have been pre tested in a school laboratory Environmental Pollution Studies will be of value to senior school pupils and students at college or university embarking on courses in environmental science An extremely useful introduction to a complex and important topic I would have no hesitation in recommending this book to anyone involved in teaching any aspect of the environmental sciences Teaching Earth Sciences

Air pollution science for the 21st century Jill Austin, Peter Brimblecombe, W. T. Sturges, 2002

The Urban Atmosphere and Its Effects Peter Brimblecombe, Robert L. Maynard, 2001 Air Pollution Reviews will provide state of the art reviews of key problems in air pollution science Leading research workers and key figures from the regulatory and industrial communities will contribute detailed and yet accessible accounts of areas in which they have recognised expertise The series will run to five volumes the first being more general than the succeeding volumes In Volume 1 current perceptions of the effects of air pollutants on health will be reviewed Recent epidemiological data on the links between particles and effects on health and the methods used to investigate these associations will be critically assessed For students reading environmental science and those beginning research on air pollution and its effects regulatory toxicologists and physicians with an interest in environmental medicine this series will be a central source of up to date critically reviewed information

Introduction to Pollution Science R M Harrison, 2007-10-31 Understanding pollution its behaviour and impact is becoming increasingly important as new technologies and legislation continually lower the tolerable levels of pollutants released into the environment Introduction to Pollution Science draws upon sections of the authors previous text Understanding our Environment and reflects the growing trend of a more sophisticated approach to teaching environmental

science at university This new revised book discusses the basics of environmental pollution drawing upon chemistry physics and biological sciences The book written by leading experts in the field covers topics including pollution in the atmosphere the world s waters and soil and land contamination Subsequent sections discuss methods of investigating the environment the impact of pollution on human health and ecological systems and institutional mechanisms for pollution management Each section includes worked examples and questions and is aimed at undergraduates studying environmental science but will also prove of value to others seeking knowledge of the field

Air Pollution Modeling and its Application XVIII Carlos Borrego,Eberhard E. Renner,2011-09-22 Recent developments in air pollution modeling are explored as a series of contributions from researchers at the forefront of their field This book on air quality modeling and its applications is focused on local urban regional and intercontinental modeling data assimilation and air quality forecasting model assessment and validation aerosol transformation the relationship between air quality and human health and the effects of climate change on air quality It consists of a series of papers that were presented at the 28th NATO CCMS Conference on Air Pollution Modeling and its Application held in Leipzig Germany May 15 19 2006 It is intended as reference material for students and professors interested in air pollution modeling at the graduate level as well as researchers and professionals involved in developing and utilizing air pollution models Discusses cutting edge developments on air pollution modeling and air quality issues Presents topical and highly relevant subjects to the air quality and modeling research community Provides material that can be used to further improve air quality modeling and to inform the community about recent and novel developments in the field

Air Pollution and Environmental Health Pallavi Saxena,Anju Srivastava,2020-06-08 Air pollution is an alarming problem not only in terms of air quality but also in relation to health issues Toxic air pollutant concentrations produce harmful impacts on plant health and human health Further though there are various sources of air pollution anthropogenic and biogenic sources are becoming increasingly problematic A number of control methods have been applied to reduce the air pollutant concentrations so that their global environmental burden on plants as well as humans can be mitigated However as confirmed in numerous reports and studies their concentrations continue to be very high and everyday cases related to air pollution have become exponentially high not only in developing countries but also in developed countries In plants toxic air quality has various adverse effects including biochemical and physiological disorders chronic diseases and or lower yields In humans air pollutants affect the body s metabolism and immune system lungs and central nervous system This book provides an essential overview of air pollution its impacts on plant and human health and potential control strategies The respective chapters cover general monitoring and characterization techniques for air pollutants air quality modelling applications plant and human health effects risk assessment and air pollution control policy Given its scope the book offers a valuable and unique resource for students of Environmental Science Biological Science Medical Science and Agriculture and for environmental consultants researchers and other professionals whose work involves air quality plant and
