Interactive Model Management System: User Interface and System Design Stanford University. Department of Operations Research. Systems Optimization Laboratory, 1990 *Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems* Mario Lucertini, Ana Millàn Gasca, Fernando Nicolò, 2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLO 1 Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Age This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20th century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity *Modern Numerical Nonlinear Optimization* Neculai Andrei, 2022-10-18 This book includes a thorough theoretical and computational analysis of unconstrained and constrained optimization algorithms and combines and integrates the most recent techniques and advanced computational linear algebra methods Nonlinear optimization methods and techniques have reached their maturity and an abundance of optimization algorithms are available for which both the convergence properties and the numerical performances are known This clear friendly and rigorous exposition discusses the theory behind the nonlinear optimization algorithms for understanding their properties and their convergence enabling the reader to prove the convergence of his/her own algorithms It covers cases and computational performances of the most known modern nonlinear

optimization algorithms that solve collections of unconstrained and constrained optimization test problems with different structures complexities as well as those with large scale real applications The book is addressed to all those interested in developing and using new advanced techniques for solving large scale unconstrained or constrained complex optimization problems Mathematical programming researchers theoreticians and practitioners in operations research practitioners in engineering and industry researchers as well as graduate students in mathematics Ph D and master in mathematical programming will find plenty of recent information and practical approaches for solving real large scale optimization problems and applications
