Air Monitoring Survey Design:

Air Monitoring Survey Design Kenneth E. Noll, Terry L. Miller, 1977 Design and Protocol for Monitoring Indoor Air Quality Niren Laxmichand Nagda, Jerome P. Harper, 1989 The book is derived from a symposium prompted by the growing concern for air quality in homes offices and schools and the need for better design of investigations about indoor air quality problems and solutions Numerous chemical and physical factors influence the indoor concentrations of contaminants The multiplicity of these factors makes the investigation design process complex So well conceived designs and protocols form a crucial starting point for successful measurement programs Design of a study relates to developing a general strategy or approach protocols refers to specific procedures to be followed in conducting a study This document aims to provide information on designs and protocols used in different types of indoor air quality monitoring studies and to supply learning opportunities through shared experience Design of Air Quality Monitoring Networks Robert Edward Munn, 1981-06-18

Richard O. Gilbert,1987-02-15 This book discusses a broad range of statistical design and analysis methods that are particularly well suited to pollution data It explains key statistical techniques in easy to comprehend terms and uses practical examples exercises and case studies to illustrate procedures Dr Gilbert begins by discussing a space time framework for

sampling pollutants He then shows how to use statistical sample survey methods to estimate average and total amounts of pollutants in the environment and how to determine the number of field samples and measurements to collect for this purpose Then a broad range of statistical analysis methods are described and illustrated These include determining the number of samples needed to find hot spots analyzing pollution data that are lognormally distributed testing for trends over time or space estimating the magnitude of trends comparing pollution data from two or more populations New areas discussed in this sourcebook include statistical techniques for data that are correlated reported as less than the measurement detection limit or obtained from field composited samples Nonparametric statistical analysis methods are emphasized since parametric procedures are often not appropriate for pollution data This book also provides an illustrated comprehensive computer code for nonparametric trend detection and estimation analyses as well as nineteen statistical tables to permit easy application of the discussed statistical techniques In addition many publications are cited that deal with the design of pollution studies and the statistical analysis of pollution data This sourcebook will be a useful tool for applied statisticians ecologists radioecologists hydrologists biologists environmental engineers and other professionals who deal with the collection analysis and interpretation of pollution in air water and soil
