Dead Reckoning Diane Vaughan,2021-09-30 When two airplanes were flown into the World Trade Center towers on September 11 2001 Americans watched in uncomprehending shock as first responders struggled to react to the situation on the ground Another remarkable and heroic feat was taking place in the air more than 550 air traffic control centers across the country coordinated their efforts to ground 4 000 flights in just two hours an achievement all the more impressive considering the unprecedented nature of the task In *Dead Reckoning* Diane Vaughan explores the complex work of air traffic controllers work that is built upon a close relationship between human organizational systems and technology and is remarkably safe given the high level of risk Vaughan observed the distinct skill sets of air traffic controllers from 1998 to today and the ways their workplaces changed to adapt to technological developments and public and political pressures She chronicles the ways these forces affected their jobs from their relationships with one another and the layouts of their offices to their understandings of their job and its place in society To fully understand the dynamic interplay of these forces Vaughan traces the profession to its origins uncovering how it has incorporated new technologies and adapted organizational practices in *dead reckoning* the process of deducing the future position of an object in space Vaughan shows how technological development changes all workplaces every organization must use *dead reckoning* to predict their future place in our ever changing social space *Human Factors in Air Traffic Control* Mark W. Smolensky,Earl S. Stein,1998-03-18 The study of human factors has progressed greatly in the past 10 years particularly with regard to the literature available in applied areas The authors of this text focus on the most important aspects of this literature the increasing concern over the deregulation of airlines and the increase in aviation accidents The book covers general system safety human perception information processing and cognitive load capacity during air traffic control performance as well as team coordination selection and training of personnel work station and software design and communication issues **Air Traffic Control: Human Performance Factors** Anne R. Isaac,Bert Ruitenber,2017-03-02 From the Foreword by Captain Daniel Maurino ICAO Air Traffic Control will remain a technology intensive system People controllers must harmoniously interact with

technology to contribute to achieve the aviation system's goals of safe and efficient transportation of passengers and cargo. This book considers human error and human factors from a contemporary and operational perspective and discusses the parts as well as the whole. I hope you enjoy reading it as much as I did. The motivation for writing this book comes from the author's long-standing belief that the needs of Air Traffic Service personnel are inadequately represented in the aviation literature. There are few references to air traffic control in many of the books written for pilots and about pilots and this is also observed at the main international conferences. In line with the ICAO syllabus for human factors training for air traffic controllers, the book covers the main issues in air traffic control with regard to human performance, physiology including stress, fatigue and shift work problems, psychology with emphasis on human error and its management, social psychology including issues of communication and working in teams, the environment including ergonomic principles and working with new technologies and hardware and software issues including the development of documentation and procedures and a study of the changes brought about by advanced technologies. Throughout the text, there are actual examples taken from the air traffic control environment to illustrate the issues discussed. A full bibliography is included for those who want to read beyond these issues. It has been written for all in air traffic services from ab initio to the boardroom; it is important that the men and women in senior management positions have some knowledge and awareness of the fundamental problems that limit and enhance human performance.
