Basic Construction Estimating:

Basic Construction Estimating Jack R. Lewis,1983 **Construction Estimating and Bidding: Training Manual to Acquire Fundamental Knowledge in Estimating Building Construction Costs** Yvon Chabot,2019-03-05 The purpose of this manual is to enable students to gain fundamental knowledge of estimating the cost of building construction projects The procedures used for estimating vary from company to company On the other hand the construction industry has become over the years more competitive which has made construction companies to do their best in order to offer the best possible service at the least price To overcome this constraint it is necessary to know precisely the cost of services And it would be the role of an Estimator Unfortunately there are no specific rules as it accounts for obtaining a good estimate even among individuals within a company Because of contracting method currently employed like fast track or PPP construction companies need precision in their estimates in addition as estimators are increasingly consulted at conceptual design stage we will talk about conceptual estimate in chapter one and then focus on detailed estimations and its process in upcoming chapters We all know that a good estimator needs to have a good knowledge about construction techniques and factors that influence the realization of a project We also know that an individual who possesses a high level of experience in his her field but also could be a poor estimator in the absence of reliable method So in this manual we will focus more on estimations method rather than techniques of construction A detailed estimate Bid Estimate can be analyzed in terms of the SIX principal stages of the process 1 Quantity Takeoff 2 Recap Quantities 3 Pricing the Recap 4 Pricing Subcontractor's work 5 Pricing General Expenses 6 Summary and Bid To decode these six steps into an effective and accurate estimation method the manual is divided into three modules Each module is divided into chapters The first module addresses the preparation of an estimate for construction and describes the entire submission process The second module deals with the methods of measurement of the constructive systems then in the third module establish the prices of the elements the expenses of the general conditions and finally close the submission **Industrial Process Plant Construction Estimating and Man-Hour Analysis**

Kenneth Storm,2019-05-22 Industrial Process Plant Construction Estimating and Man Hour Analysis focuses on industrial process plants and enables the estimator to apply statistical applications estimate data tables and estimate sheets to use methods for collecting organizing summarizing presenting and analyzing historical man hour data The book begins with an introduction devoted to labor productivity measurement collection of historical data verification of data estimating methods and factors affecting construction labor productivity and impacts of data It goes on to explore construction statistics and mathematical spreadsheets followed by detailed scopes of work ranging from coal fired power plants to oil refineries and solar plants among others Man hour schedules based on historical data collected from past installations in industrial process plants are also included as well as a detailed glossary Excel and mathematical formulas area and volume formulas metric standard conversions and boiler man hour tables Industrial Process Plant Construction Estimating and Man Hour Analysis
