

Government of India Act (1935)

Basic Features of Government of India Act 1935

1. *Creation of All India Federation (Provincial Autonomy)*

- **Provincial Autonomy:** Autonomy to provinces was given effect by dividing legislative and executive powers between the Provinces and the Centre.
- The Provinces were under the executive authority of Governor appointed by the Crown. Governor exercised the powers on the advice of Ministers, who were in turn responsible to Provincial legislature.
- Governor was given discretion to carry out certain functions, without being bound by Ministerial advice, subject to the control of the Governor- General.

2. *Division of Power*

- **Federal List:** 59 subjects, under the authority of Central Legislature, currency, armed forces etc.
- **Provincial List:** 54 subjects, under the authority of Provincial Legislature, education, public health etc.
- **Concurrent List:** 36 subjects, under the authority of both Central and Provincial Legislature, marriage, criminal law, civil law etc.
- **Residuary Powers:** Viceroy

3. *Dyarchy Abolished only at provincial level. (double rule)*

The Geochemistry of Manganese and Manganese

Nodules in the Ocean G.N. Baturin, 2012-12-06 Manganese nodules were first discovered on the ocean floor 160 miles south west of the Canary Islands on February 18 1803 during the first complex oceanological cruise of the Challenger They surprised researchers by their unusual shape and also by their unusual chemical composition nevertheless for many years afterwards they were considered merely as one of Nature's exotic marine tricks After the Second World War a comprehensive investigation of the World Ocean started and new data were obtained on a wide distribution of manganese nodules and their polymetallic composition that made scientists consider nodules as one of the major characteristics of the deep oceanic zone Recently meaning since the 1960s nodules have been recognized as a potential ore source investigation of which is stimulated by the progressive depletion of land-based mineral resources Several generations of scientists from various countries have contributed to the problem of exploration of manganese nodules on the ocean floor Though the problem has been posed it has not been solved yet because it required in its turn a scrutiny of some fundamental aspects such as composition nature accretion rate of nodules and retrieval of nodule fields These problems have been discussed in thousands of papers and larger publications see in particular Mero 1965 Horn 1972 Morgenstein 1973 Bezrukov 1976 Glasby 1977 Bischoff and Piper 1979 Lalou 1979 Manganese nodules 1979 Varentsov 1980 Cronan 1980 Manganese nodules 1984 1986

The New Political Economy of Disability Georgia van Toorn, 2021-02-22

This book addresses the ways in which individualised market-based models of disability support provision have been mobilised in and across different countries through cross-national investigation of individualised funding IF as an object of neoliberal policy mobility Combining rich theoretical and interdisciplinary perspectives with extensive empirical research the book provides a timely examination of the policy processes and mechanisms driving the spread of IF amongst countries at the forefront of disability policy reform It is argued that IF's mobility is not attributable to neoliberalism alone but to the complex

intersections between neoliberal and emancipatory agendas and to the transnational networks that have blended the two agendas in new ways in different institutional contexts The book shows how disability rights struggles have synchronised with neoliberal agendas which explains IF s propensity to move and mutate between different jurisdictions Featuring first hand accounts of the activists and advocates engaged in these struggles the book illuminates the consequences and risks of the dangerous liaisons and political trade offs that seemed necessary to get individualised funding on the policy agenda for disabled people It will be of interest to all scholars and students working in disability studies social policy sociology and political science more generally

Aquatic Surface Chemistry Werner Stumm, 1987-05-11 This comprehensive contributed volume presents an account of current research and applications of chemical processes occurring at the interfaces of water with naturally occurring solids Interactions of solutes with the solid surfaces are looked at from a mechanistic and dynamic point of view rather than a descriptive one Processes discussed and concepts presented are applicable to all natural waters oceans and fresh waters as well as soil and sediment water systems and to the surfaces of natural solids such as minerals soils sediments biota and humus Chapters progress from theoretical models and laboratory studies to applications in natural water soil and geochemical systems emphasizing those processes that regulate the distribution and concentration of elements and compounds Topics covered include adsorption mechanisms in aquatic surface chemistry the electric double layer at the solid solution interface aspects of molecular structure in surface complexes spectroscopic investigations interpretation of metal complexation by heterogeneous complexants the role of colloids in the partitioning of solutes in natural waters and from molecules to planetary environments understanding global change

Marine Mineral Exploration H. Kunzendorf, 1986-05-01 The past 20 years have seen extensive marine exploration work by the major industrialized countries Studies have in part been concentrated on Pacific manganese nodule occurrences and on massive sulfides on mid oceanic ridges An international jurisdictional framework of the sea bed mineral resources was negotiated by the United Nations Conference on the Law of the Sea UNCLOS III A most important outcome of this conference was the establishment of an Exclusive Economic Zone EEZ of at least 200 nautical miles for all coastal states and the recognition of a deep sea regime Mineral deposits in EEZ areas are fairly unknown many areas need detailed mapping and mineral exploration and the majority of coastal or island states with large EEZ areas have little experience in exploration for marine hard minerals This book describes the systematic steps in marine mineral exploration Such exploration requires knowledge of mineral deposits and models of their formation of geophysical and geochemical exploration methods and of data evaluation and interpretation methods These topics are described in detail by an international group of authors A short

description is also given of marine research vessels evaluation of marine exploration examples and an overview is provided of the jurisdictional situation after UNCLOS III Methods for Geochemical Analysis Philip A. Baedeker, 1987 Analytical methods used in the Geologic Division laboratories of the U S Geological Survey for the inorganic chemical analysis of rock and mineral samples **Selected Water Resources Abstracts** ,1972
