dermatopathologist and the most modern diagnostic weapons sometimes play a crucial role in the differential diagnosis with other non malignant entities as well as between the different types of lymphomas Clinically they sometimes simulate many other conditions and are not always easy to be recognise by the dermatologist In 2005 a new classification of cutaneous lymphomas was published in an attempt to achieve a better comprehension of the nature and behaviour of these tumours Nevertheless many new aspects of pathogenesis diagnosis and differential diagnosis are constantly appearing in medical literature This current book is an attempt to present to the reader the field of cutaneous lymphomas in a way that can be useful in daily practice either as a general surgical pathologist a dermatologist or a dermatopathologist At the same time the reader will find updated information which will probably be very helpful in order to face confidently most of the difficult clinical and histopathologic cases The book goes through most of the cutaneous lymphomas in systematic order either B cell T cell or Hodgkin type presenting the clinical and morphological aspects which include many of the most recent molecular contributions Many of the chapters also provide a therapeutic approach
