Y. Lerner, 2012-12-06 The development of science consists not only of deepening and widening the already established scientific disciplines but also depends on the emergence of new ones The emergence and development of new sciences is influenced primarily by two factors isolation and generalisation Isolation of scientific disciplines is due to the discovery of new objects of investigation and the emergence of specific scientific trends This leads to the study of a relatively narrow class of objects which are characterised by their specific approach to both the formulation and the solution of problems Examples of this type of specific scientific disciplines include for instance chemistry of high molecular compounds and the theory of electrical machines which are both devoted to the study of a relatively narrow field In addition there are the more general scientific disciplines whose characteristics are

that they are created for the purpose of studying such natural phenomena as occur in a very wide class of objects Disciplines of this type are for instance the theory of dimensions and the theory of similarity the theory of dynamic systems and thermodynamics The very general as opposed to the very specific sciences tend by their nature to be more theoretical and depend much more on the language mathematical or otherwise used to describe them

Complexity Management in Engineering Design - a Primer Maik Maurer, 2017-02-21 The treatise supports understanding the phenomena of complexity in engineering distinguishes complexity from other challenges and presents an overview of definitions and applied approaches The historical background of complexity management is explained by highlighting the important epochs their key actors and their discoveries findings and developments Knowing about the appearance of early system awareness in ancient Greece the creation of mechanical philosophy in the 17th century and the discovery of classic physics enables the reader to better comprehend modern system sciences and management approaches A classification of complexity management approaches by research fields indicates current focus areas and starting points for future discussions In a comprehensive map the classification points out mutual overlaps between engineering disciplines in terms of similar complexity management approaches Finally the treatise introduces a generic complexity management framework which is based on structural management approaches
