The original series *Advances in Prostaglandin Research* edited by Sultan M M Karim was published by MTP Press in three volumes in 1975 and 1976. A glance at those books illustrates the progress that has been made since then. The thromboxanes were mentioned twice first publication 1975 and prostacyclin not once first publication 1976. Leukotrienes were only on the horizon. The amazing generation of research data in the last 10-15 years has given new broad insights into many areas including asthma, inflammation, renal, cardiovascular and gastrointestinal diseases and in reproduction and has led in some instances to real clinical benefit. This series *Advances in Eicosanoid Research* reflects the current understanding of prostaglandins, thromboxanes and leukotrienes. The aim is to provide an introductory background to each topic and the most up to date information available. Although each book stands alone, the eicosanoids cut across many boundaries in their basic actions. Selected chapters from each book in the series will provide illuminating and productive information for all readers which will advance their education and research. In the production of this series I must acknowledge with pleasure my collaboration with editors and authors and the patient endeavours of Dr Michael Brewis and the staff at MTP Press.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1985 *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Prostaglandin and Lipid Metabolism in Radiation Injury** Thomas L., Jr. Walden, Haywood N. Hughes, 2012-12-06. This volume contains the proceedings of the International Conference on Prostaglandins and Lipid Metabolism in Radiation Injury held in Rockville, Maryland on October 2-3, 1986. Over 200 persons from eight countries attended the program which consisted of 24 oral presentations and 38 poster presentations. Forty-two of those presentations have been included in this volume. The conference was sponsored by the Armed Forces Radiobiology Research Institute located in Bethesda, Maryland. The effects of radiation on lipid synthesis and membrane damage are aptly summarized in the first five chapters. These chapters describe the effects of radiation on lipid peroxidation of model membranes and the role of lipid composition in mammalian cell death and in bacterial radio and thermosensitivity. In bacteria, lipid peroxidation is not essential for radiation induced cell death. One of the key points of the conference was the paradoxical nature of the radiobiology of eicosanoids. On the one hand, eicosanoids are mediators of damage; on the other, they are radioprotective agents. It is clear from the literature and from the data presented at the conference that both of these properties may also be observed as a consequence of radiotherapy. Some studies indicate that
