Copyright Office, 1978      **English Journal**, 1978      **Coordination Languages and Models** Paolo Ciancarini, Alexander L. Wolf, 2003-07-31 We welcome you to Coordination 99 the third in a series of conferences dedicated to an important perspective on the development of complex software systems That perspective is shared by a growing community of researchers interested in models languages and implementation techniques for coordination The last decade has seen the emergence of a class of models and languages variously termed coordination languages coordination languages architectural description languages and agent oriented programming languages These formalisms provide a clean separation between individual software components and their interaction within the overall software organization This separation makes complex applications more tractable supports global analysis and enhances the reuse of software components The proceedings of the previous two conferences on this topic were published by Springer as Lecture Notes in Computer Science 1061 and 1282 This issue of LNCS containing the papers presented at Coordination 99 continues the tradition of carefully selected and high quality papers representing the state of the art in coordination technology In response to the call for papers we received 67 submissions from which 26 papers were accepted These proceedings also contain abstracts for posters presented at the conference This year's program features invited talks by Rocco De Nicola and Danny B Lange Reading through the papers we expect that you may be surprised by the variety of disciplines within computer science that have embraced the notion of coordination In fact we expect this trend to continue and hope that you will contribute to the ongoing exploration of its strengths weaknesses and applications

*Integrated Model of Distributed Systems* Wiktor B. Daszczuk, 2019-03-16 In modern distributed systems such as the Internet of Things or cloud computing verifying their correctness is an essential aspect This requires modeling approaches that reflect the natural characteristics of such systems the locality of their components autonomy of their decisions and their asynchronous communication However most of the available verifiers are unrealistic because one or more of these features are not reflected Accordingly in this book we present an original formalism the Integrated Distributed Systems Model IMDS which defines a system as two sets states and messages and a relation of the actions between these sets The server view and the traveling agent's view of the system provide communication duality while general temporal formulas for the IMDS allow automatic verification The features that the model checks include partial deadlock and partial termination communication deadlock and resource deadlock Automatic verification can support the rapid development of distributed systems Further on the basis of the IMDS the Dedan tool for automatic verification of distributed systems has been developed      Intelligent Agents V: Agents Theories, Architectures, and Languages Jörg Müller, Munindar P. Singh, Anand S. Rao, 2007-04-29 The leading edge of computer science research is notoriously fickle New trends come and go with alarming and unfailing

regularity In such a rapidly changing field the fact that research interest in a subject lasts more than a year is worthy of note The fact that after five years interest not only remains but actually continues to grow is highly unusual As 1998 marked the fifth birthday of the International Workshop on Agent Theories Architectures and Languages ATAL it seemed appropriate for the organizers of the original workshop to comment on this remarkable growth and reflect on how the field has developed and matured The first ATAL workshop was co-located with the Eleventh European Conference on Artificial Intelligence ECAI 94 which was held in Amsterdam The fact that we chose an AI conference to co-locate with is telling at that time we expected most researchers with an interest in agents to come from the AI community The workshop which was planned over the summer of 1993 attracted 32 submissions and was attended by 55 people ATAL was the largest workshop at ECAI 94 and the clear enthusiasm on behalf of the community made the decision to hold another ATAL workshop simple The ATAL 94 proceedings were formally published in January 1995 under the title Intelligent Agents and included an extensive review article a glossary a list of key agent systems and unusually for the proceedings of an academic workshop a full subject index The high scientific and production values embodied by the ATAL 94 proceedings appear to have been recognized by the community and resulted in ATAL proceedings being the most successful sequence of books published in Springer Verlag's Lecture Notes in Artificial Intelligence series
