Basic Manipulations And Movement:

, *Spinal Manipulation Made Simple* Jeffrey Maitland, 2012-10-30 Written by an expert on alternative bodywork this book presents techniques for manipulating the soft tissues of the back in a safe simple manner The method avoids the high velocity low amplitude thrusting techniques employed by chiropractors Instead it utilizes the intuitive sense of somatic bodyworkers combined with the proven theory and technique of Rolfing to provide safe and effective treatment Maitland shows how to elegantly release joint fixations in the spine sacrum pelvis and ribcage by using subtle soft tissue techniques rather than the thrusting techniques that pop the joints This gentler kind of individualized Rolfing work is thoroughly described within an explanation of biomechanics aided by drawings and photographs which depict techniques and anatomy

Stjepandić,2014-09-23 The theory of concurrent engineering is based on the concept that the different phases of a product lifecycle should be conducted concurrently and initiated as early as possible within the product creation process Concurrent engineering is important in many industries including automotive aerospace shipbuilding consumer goods and environmental engineering as well as in the development of new services and service support This book presents the proceedings of the 21st ISPE Inc International Conference on Concurrent Engineering held at Beijing Jiaotong University China in September 2014 It is the first volume of a new book series Advances in Transdisciplinary Engineering The title of the CE2014 conference is Moving Integrated Product Development to Service Clouds in the Global Economy which reflects the variety of processes and methods which influence modern product creation After an initial first section presenting the keynote papers the remainder of the book is divided into 11 further sections with peer reviewed papers product lifecycle management PLM knowledge based engineering KBE cloud approaches 3 D printing applications design methods educational methods and achievements simulation of complex systems systems engineering services as innovation and science sustainability and recent research on open innovation in concurrent engineering The book will be of interest to CE researchers practitioners from industry and public bodies and educators alike *Modeling and Transformation of Workflows with Temporal Constraints* Wolfgang Gruber,2004 Workflow management systems support the execution of business processes they require the modeling of the processes they drive the actual enactment of process

instances and they document the business process execution Many different modeling languages and systems have been developed for the design and representation of business processes and workflows as a consequence of different requirements different purposes as well as different schools and modeling philosophies The differences are partly on a conceptual level in the sense that the modeling languages offer different concepts and constructs and partly on the representation level where basically the same constructs are represented differently e g text or graph based This book makes two important contributions to workflow modeling Firstly it provides a metamodel based on abstract modeling concepts which copes with representation differences of workflow descriptions Secondly it introduces a set of equivalence transformations on workflow models Such transformations are an important tool for workflow developments as they allow representing workflows differently for different purposes These transformations are used in algorithms for checking the satisfiability of temporal constraints in workflow definitions Using this apparatus made it possible to develop a sophisticated time management system for workflows which not only checks temporal constraints but can also be used to develop time plans for workflow execution
