Cyclic Amp Cell Growth And The Immune Response:

Cyclic AMP, Cell Growth, and the Immune Response W. Braun, L.M. Lichtenstein, C.W. Parker, 2013-11-09 The brilliant research of Dr Earl Sutherland and his colleagues has had a broad impact on many areas of biology Among the fields influenced rather late by the insights arising from this work were immunology and oncology Although research relating cyclic AMP metabolism to the development and manifestations of the immune response and the control of mammalian cell growth is relatively recent the growth of knowledge in these areas has been rapid and there is already a considerable amount of empirical information This conference provided an opportunity to collate and begin to interpret that information A deliberate attempt was made to bring together investigators nominally involved in immunology biochemistry pharmacology or cellular biology for in many instances parallel observations are being obtained in these fields For example the immunologist studying the transformation of lymphocytes by antigens or mitogens is carrying out experiments that are very close to those of the biologist studying the growth of cells in culture in both cases the phenomena they observe are modulated by changes in the intracellular level of cyclic nucleotides Many other examples of closely analogous experiments in different fields could be cited but perhaps the point is clear Modulation of Host Immune Resistance in the Prevention Or Treatment of Induced Neoplasias Michael A. Chirigos, 1977 Arachidonate Metabolism in Immunologic Systems L. Levine, 1988 **Carcinogenesis Abstracts**, 1977 *Radiotherapy, Surgery, and Immunotherapy* Frederick Becker, 2012-12-06 The history of the development of cancer therapy has been marked by a recurring pattern one of initially exciting and encouraging results as new methods were introduced followed by dismaying failures The extremity of the disease and its high mortality have dictated that each means of damaging tumor cells would be rapidly explored and exploited as a mode of therapy long before the corresponding theory and technique were completely understood and perfected Thus radiation was used as an antitumor agent almost immediately following recognition of its cytotoxic capability Equally constant following the rapid utilization of new therapeutic methods has been a period of significant technical improvements This second aspect of the pattern is also illustrated by the field of radiotherapy New radiation sources new methods of dosimetry use of high energy radiation and other new techniques allowed the therapist to better focus upon the tumor and to improve the geometry of exposure Thus with each technical advance the reach of radiotherapy was increased and damage to normal tissues was decreased Inevitably however a limit was reached a point at which clinicians and researchers realized they could go no further without returning to a more fundamental search one based on the biology of the tumor cell itself **Receptors and Cellular Pharmacology** E. Klinge, 2013-10-22 Receptors and Cellular Pharmacology is a collection of the proceedings of the Sixth International Congress of Pharmacology held in Helsinki Finland on July 20-25 1975 and organized by the Finnish Pharmacological Society The papers explore developments relating to receptors and cellular pharmacology and address a wide range of topics such as the hydrophobic properties of the

neuromuscular blocking agents and the use of toxins as tools in receptor studies Comprised of 21 chapters this volume begins with an introduction to histamine receptors their pharmacological taxonomy and classification their presence in the gastric mucosa and their applications in medicine The discussion then turns to pharmacological investigations on cells in culture the acetylcholine receptor of intact and cultured chicken retina cells actions of neurotoxins on the acetylcholine receptor and the isolation and characterization of membrane receptors Subsequent chapters deal with cyclic nucleotides as mediators of drug action with particular reference to the mechanism of the relaxation promoting effects of epinephrine on the mammalian heart This book should be of interest to pharmacologists internists psychiatrists neurologists and anesthesiologists *Journal of the National Cancer Institute* ,1978

Mammalian Cell Biotechnology in Protein Production Hansjörg Hauser,Roland Wagner,2011-07-13 Hauser und Wagner haben die neuen Möglichkeiten der Mammalian Cell Biology sehr anregend dargestellt Prof Dr Hans Fritz Ludwig Maximilians Universität München Research Grants Index National Institutes of Health (U.S.). Division of Research Grants,1975 **Evolution of Immune Reactions** Petr Sima,Vaclav Vetvicka,1990-08-27 This book on phylogeny and immunity reconstructs the history and evolutionary pathways of immunity among the various forms of life The authors argue that the immunity could have evolved different adequately successful patterns in the animal sub regnum which are strictly determined by the morpho physiological possibilities of the animals They state that the vertebrate type of immunity evolved only in the chordate branch The publication devotes special attention to the arthropods and molluscs as they have attracted more investigative efforts than any other invertebrate taxa The authors selected Agnatha Chondrichthyes and Osteichthyes from the vertebrate taxa in order to show where and how the morphofunctional basis of the truly adaptive immunity of the endothermic tetrapods gradually evolved Each chapter gives the description of the origin and interrelationships of the representatives of the taxon in question Also given are the main biological morphological non morphological and immune attributes Emphasized throughout the book is the central idea that immunological reactions are a part of the overall biological phenomena and should be studied only from this aspect The authors express that the fields of comparative and evolutionary immunology will provide inspiration for further investigations in biomedicine in the near future *Subject Index of Current Extramural Research Administered by the National Cancer Institute* ,1978 **Research Awards Index** ,1978 *Post-Translational Modifications in Health and Disease* Cecilio J. Vidal,2010-10-13 Post translational modifications serve many different purposes in several cellular processes such as gene expression protein folding and transport to appropriate cell compartment protein lipid and protein protein interactions enzyme regulation signal transduction cell proliferation and differentiation protein stability recycling and degradation Although several hundred different modifications are known the significance of many of them remains unknown The enormous versatility of the modifications which frequently alter the physico chemical properties of the respective proteins represents an extraordinary challenge in understanding their physiological role Since essential cellular functions are

regulated by protein modifications an improvement of current understanding of their meaning might allow new avenues to prevent and or alleviate human and animal diseases **JNCI, Journal of the National Cancer Institute** National Cancer Institute (U.S.),1980 The Prostaglandins Peter Ramwell,2013-11-11 There is much evidence to suggest that prostaglandins may have a physiological role to play in the control of thyroid gland metabolism although the precise nature of this role remains to be defined Prostaglandins have been found in normal thyroid tissue and there is evidence of increased levels in some but not all cases of medullary carcinoma of the thyroid which may account for the associated diarrhea Exogenous prostaglandins like TSH bind to thyroid plasma mem branes stimulate the adenylate cyclase cyclic AMP system thyroid hormone secretion iodide organification colloid droplet formation glucose oxidation and 32p incorporation into phospholipids Prosta glandins of the E series are the most potent although their maximal effects are generally less than the maximal effects of TSH The interrelationships existing between TSH and prostaglandins have been the subject of intensive investigation but as yet no one uni fying concept has emerged TSH and prostaglandins have been shown to occupy different receptors on the thyroid plasma membrane Al though TSH can increase intracellular prostaglandin levels probably as a result of increased synthesis prostaglandins do not appear to be essential intermediates in TSH action on adenylate cyclase The pos sibility that prostaglandins are part of a negative feedback system con trolling TSH action is as yet a tentative hypothesis and further work will be required to unravel the interrelationships between these sub stances that now appear to be far more complex than has been envisaged thus far *Cyclic Nucleotides and the Regulation of Cell Growth* Morad A. Abou-Sabé,1976 *Neotyphodium/Grass Interactions* Charles W. Bacon,Nicholas S. Hill,2013-06-29 Proceedings of the 3rd International Symposium on Acremonium Grass Interactions held in Athens Georgia May 28 31 1997 *Adrenergic Activators and Inhibitors* ,2012-12-06 Not much more than a decade has passed since the appearance of the outstanding handbook Catecholamines edited by BLASCHKO and MUSCHOLL in the series Handbook of Experimental Pharmacology However this extremely well organized volume dealt mainly with the origin molecular actions and fate of the naturally occuring catecholamines It was felt that a separate volume should be dedicated to the remarkable and exciting progress made in the field of agents influencing the adrenergic system both in physiologic and pharmacologic respect The editor of the present volume considers himself lucky to have been able to persuade a number of eminent specialists to collaborate The main concept of the present handbook is a systematic approach to the various effects of adrenergic activators and inhibitors starting with the chemistry and structure actitivity relationship followed by the evaluation of adrenergic activators and inhibitors and discussing their mode of action The most voluminous part is the chapter dealing with the systemic pharma cology of these agents analyzing the effects on the central nervous system on the autonomic nervous system on the cardiovascular the respiratory the digestive the endocrine system on the skeletal muscle and on metabolism Kinetics and bio transformation further toxic effects are discussed in the following chapters A special chapter on clinical features concludes

the monograph **Immunopharmacology** J. Hadden, 2012-12-06 Immunopharmacology A New Discipline of Immense Potential Among the looming triumphs of the biologic revolution is the rapidly developing understanding of the mechanisms of bodily defense In the short span of 35 years knowledge of immunologic machinery has progressed from crudest description to major understanding in cellular and molecular terms Antibodies immunoglobulins and the complement system have been almost completely defined in detailed molecular terms Organs like thymus spleen and lymph nodes so long enigmatic black boxes are beginning to be understood not only in cellular terms but in molecular physiologic and endocrinologic terms With this surging new information about the immune system comes the possibility of developing a pharmacology which can modulate and control immunologic functions Immunopharmacology most broadly conceived must address 1 control of development and function of the cellular components of the immunologic apparatus 2 facilitation and suppression of function of the immunologically competent cells of the several subclasses like T helpers suppressors and effectors and B effectors and suppressors 3 manipulation and repair of the major biologic amplification systems e g the complement system and kinin kallikrein system and 4 utilization modulation and inhibition of the galaxy of molecules generated by T lymphocytes the lymphokines This new pharmacology must deal with the fundamental effector mechanisms of immunity namely inflammation phagocytosis vascular reactivity and blood coagulation Furthermore immunopharmacology must address and manipulate cell cell communication and interaction so vital to control of the immunological apparatus *Cumulated Index Medicus* ,1974
