Cyclical Serpent Prospects For An Ever Repeating Universe:

The Cyclical Serpent Paul G. Halpern, 2013-11-11 Halpern's journey leads us through the most extraordinary breakthroughs in twentieth century physics and cosmology and to the remarkable tools scientists employ to look backward and forward in time He also reveals the fascinating pieces of the puzzle still missing from our picture of the universe keys that promise to unlock our elusive destiny What is dark matter and how much of our universe does it comprise What is the size and age of the universe How did events unfold in the critical seconds after the Big Bang The answers to these and other questions will help us decipher our fate *Edge of the Universe* Paul Halpern, 2012-08-10 An accessible look at the mysteries that lurk at the edge of the known universe and beyond The observable universe the part we can see with telescopes is incredibly vast Yet recent theories suggest that there is far more to the universe than what our instruments record in fact it could be infinite Colossal flows of galaxies large empty regions called voids and other unexplained phenomena offer clues that our own bubble universe could be part of a greater realm called the multiverse How big is the observable universe What it is made of What lies beyond it Was there a time before the Big Bang Could space have unseen dimensions In this book physicist and science writer Paul Halpern explains what we know and what we hope to soon find out about our extraordinary cosmos Explains what we know about the Big Bang the accelerating universe dark energy dark flow and dark matter to examine some of the theories about the content of the universe and why its edge is getting farther away from us faster Explores the idea that the observable universe could be a hologram and that everything that happens within it might be written on its edge Written by physicist and popular science writer Paul Halpern whose other books include *Collider The Search for the World's Smallest Particles* and *What's Science Ever Done For Us What the Simpsons Can Teach Us About Physics Robots Life and the Universe* **Nietzsche's Affirmative Morality** Peter Durno Murray, 2015-06-03 This book argues that Nietzsche bases his affirmative morality on the model of individual responsiveness to otherness which he takes from the mythology of Dionysus The subject is not free to choose to avoid such responding to the demands of the other Nietzsche finds that the basic mode of responding is pleasure This feeling as a basis for morality underlies the morality which is true to the earth and the major concepts of will to power eternal return and amor fati The priority of otherness makes all thought ethical and not only aesthetic The basis of all meanings combines the fundamental impulse of responding outwards with an immediate complement in the individual interpretation world This is specifically ethical because the recognition of our own historical specificity arises as a result of the refusal of others to become mere differences within our notion of the Same and through their demand that we become who we are in the recognition of their separate existence *A Traveler's Guide to the Afterlife* Mark Mirabello, 2016-09-15 A grand survey of the world's death and afterlife traditions throughout history Examines beliefs from many different cultures on the soul heaven hell and reincarnation instructions for accessing the different worlds of the afterlife how one may become a god and how ethics and the afterlife may not be connected

Explores techniques to communicate with the dead including s ance instructions Includes an extensive bibliography of more than 900 sources from around the world Drawing on death and afterlife traditions from cultures around the world Mark Mirabello explores the many forms of existence beyond death and each tradition s instructions to access the afterlife He examines beliefs on the soul heaven hell and reincarnation and wisdom from Books of the Dead such as the Book of Going Forth by Day from Egypt the Katha Upanishad from India the Bardo Thodol from Tibet the Golden Orphic Tablets from Greece Lieh Tzu from China and Heaven and its Wonders and Hell from Things Heard and Seen from 18th century Europe Considering the question What is Death Mirabello provides answers from a wide range of ancient and modern thinkers including scientist Nicholas Maxwell the seer Emanuel Swedenborg 1st century Buddhist philosopher Nagarjuna and Greek philosopher Euripides who opined that we may already be dead and only dreaming we are alive He explores the trek of the soul through life and death with firsthand accounts of the death journey and notes that what is perceived as death here may actually be life somewhere else He reveals how in many traditions ethics and the afterlife are not connected and how an afterlife is possible even without a god or a soul Sharing evidence that consciousness is not simply a product of the brain he offers a strong rebuttal to nihilists materialists and the Lokayata philosophical school of India who believe in the finality of death He explains how specters and ghosts are produced and offers techniques to communicate with the dead as well as instructions for an out of body experience and the complete procedure for a s ance With an extensive bibliography of more than 900 sources this guide offers comprehensive information on afterlife beliefs from the vast majority of cultures around the world and throughout history a veritable traveler s guide to the afterlife

Halpern, 2024-01-16 A rich and rewarding history of one of the most astounding ideas in physics and astronomy Marcia Bartusiak that the universe we know isn't the only one Our books our movies our imaginations are obsessed with extra dimensions alternate timelines and the sense that all we see might not be all there is In short we can't stop thinking about the multiverse As it turns out physicists are similarly captivated In *The Allure of the Multiverse* physicist Paul Halpern tells the epic story of how science became besotted with the multiverse and the controversies that ensued The questions that brought scientists to this point are big and deep Is reality such that anything can happen must happen How does quantum mechanics choose the outcomes of its apparently random processes And why is the universe habitable Each question quickly leads to the multiverse Drawing on centuries of disputation and deep vision from luminaries like Nietzsche Einstein and the creators of the Marvel Cinematic Universe Halpern reveals the multiplicity of multiverses that scientists have imagined to make sense of our reality Whether we live in one of many different possible universes or simply the only one there is might never be certain But Halpern shows one thing for sure how stimulating it can be to try to find out
