Cytokine Network And Immune Functions:

The Cytokine Network and Immune Functions Jacques Thèze, 1999 The great scientific progress in our understanding of the genetics chemistry biology and pathophysiology of the cytokines has made clear the need for a comprehensive discussion of these molecules as part of a unified system The Cytokine Network and Immune Functions provides just such a treatment It represents the efforts of many of the most prominent scientists studying these molecules Not only does it present a general discussion of each of the major cytokines or sets of cytokines it deals in detail with how these molecules affect all aspects of immune function and how they contribute to a wide range of pathological conditions As the title clearly indicates this book does not treat individual cytokines in isolation it recognizes that they act in a complex web of synergistic and counter regulatory effects so as to provide opportunities for the very fine control of immune responses Cytokine biology is not only a fascinating scientific discipline giving insight into how the immune and inflammatory systems are linked and regulated but also it is a subject of profound importance in modern medicine As the chapters in the section of this book entitled Cytokines in Pathology indicate virtually all insults to the organism be they acute or chronic call upon cytokine responses and virtually every disease entity has a component involving the function of cytokines In some diseases such as allergy and asthma and many of the autoimmune disorders abnormal cytokine responses are at the very heart of the disease process in others their impact may be more peripheral There can be no doubt however that the study of cytokine biology has contributed greatly to the growing power of molecular medicine transforming our approach to disease and building a new armamentarium of drugs and other treatments that promise to revolutionize our capacity to control a wide range of disease states

Cytokine and Chemokine Networks in Cancer Manzoor Ahmad Mir, 2023-10-19 Cytokine and Chemokine Networks in Cancer provides a comprehensive exploration of the roles of cytokines and chemokines in cancer biology It offers valuable insights into their diagnostic prognostic and therapeutic implications making it a valuable resource for researchers clinicians and students interested in the field of cancer immunology and therapy This book illustrates the importance and significance of the cytokine and chemokine signaling networks in tumor development and progression It describes the complex networks mediated by cytokine and chemokine receptors promoting tumor cell proliferation site directed metastasis and activation of angiogenic switch in tumor cells The books also shed light on the heterogeneity of cytokines and chemokine in solid malignancies and their impact on tumor progression and therapeutic outcomes The chapters provide current information about the types of cytokine chemokine interactions in promoting cancer stem cell like characteristics epithelial to mesenchymal transition and modulation of the tumor microenvironment The significance of the complex interactions in cancer biology in the light of therapeutic resistance is also highlighted The chapters also describe recent advancements in the therapeutic potential of targeting the pro tumor cytokine and chemokine networks and limiting tumor cell metastasis Finally the book also provides a comprehensive yet representative description of a large number of challenges associated with targeting these vital

chemokine cytokine networks Given its content the book provides valuable information for researchers in the field of cancer biology and molecular medicine

Exercise and Immune Function Laurie Hoffman-Goetz, 2024-11-01 In *Exercise And Immune Function* leading experts discuss what is known about physical activity and its effects on the immune system This unique reference describes the science and application of exercise immunology providing an excellent source of expert information for researchers students and practitioners The impact of exercise on immune function in dieters in combination with alcohol use and in the elderly are addressed and up to date reviews on the relationships between exercise and the risk of disease are provided Anyone in basic medical science sports medicine exercise physiology immunology and health promotion should have a copy of this book

Dietary Components and Immune Function Ronald Ross Watson, Sherma Zibadi, Victor R. Preedy, 2010-07-30 *Dietary Components and Immune Function* focuses on immune modulation immune mediated disease resistance immune changes due to AIDS immune modulated cancer therapy and autoimmune diseases as modified by dietary supplement bioactive foods and supplements The potential value of such approaches in maintaining wellness and preventing disease are addressed by examining their effects in vitro and in vivo on innate and adaptive immune responses Emerging fields of science and important discoveries relating to early stages of new nutraceuticals in cancer prevention prior to clinical trials are also covered This volume represents a single source of material related to nutraceuticals and their constituents as they relate to cancer therapy and prevention As such the book will be essential reading for nutritionists pharmacologists health care professionals research scientists cancer workers pathologists molecular or cellular biochemists physicians general practitioners as well as those interested in diet and nutrition in disease resistance via immune regulation

Tropical Diseases Sangkot Marzuki, Jan Verhoef, Harm Snippe, 2003-07-31 For example the book discusses traditional tropical medicine topics of infectious diseases and nutritional deficiencies These diseases are common in the tropics although some are associated more with poverty than with tropical living conditions It also deals with genetic diseases and genomic issues that are truly associated with living in the tropics e g the thalassemias The book begins with several papers describing the vast human genetic diversity of Southeast Asia and its relationship to several genetic disorders These papers illustrate the future direction of genomic activities in relation to disease susceptibility and resistance The next sections deal with malaria and four specific viral and bacterial diseases of the tropics hepatitis B and C tuberculosis and leprosy These are then followed by a section on general bacterial infection Two papers on nutrition complete the volume

Phylogenesis of Immune Functions Gregory W. Warr, Nicholas Cohen, 2024-12-20 This volume discusses recent advances in research regarding the evolution of specific and nonspecific defense responses in a taxonomically diverse array of species Topics regarding invertebrates include the protective mechanisms cellular and molecular employed by insects the protective roles of lectins and the self nonself discrimination revealed by tissue incompatibility reactions With vertebrates the evolution of the immunoglobulin related superfamily of recognition molecules including immunoglobulins and the major

histocompatibility complex molecules is examined over several chapters Other topics reviewed include the evolution of nonimmunoglobulin mediators of defense e g cytokines and eicosanoids lymphocyte subpopulations including effects of ambient temperature on function and the phylogenetic emergence of natural killer cells Phylogenesis of Immune Functions provides invaluable information for evolutionary biologists as well as all immunologists and other researchers interested in discovering how inhabitants in our increasingly threatened biosphere protect themselves against environmental pathogens and toxins Cytokines and Cytokine Receptors Constantin A. Bona, Jean-Pierre Revillard, 2003-09-02 The field of cytokine research is expanding at a rapid pace Contributions from the major leading groups in the world on the structure and biological properties of cytokine and cytokine receptors as well as integrated reviews on cytokines in various physiological and pathological conditions were presented in three issues of International Reviews of Immunology This collection of articles provided a unique source of information However important discoveries are emerging very rapidly and some of the reviews written in 1997 are already outdated In this book the editors assemble reviews that have been updated by their authors to include all the recent publications and unpublished data from the authors laboratories This volume should serve as an excellent reference source for all those concerned by the multiple faces of cytokines in basic research and in the clinic

The Cytokine Network Frances R. Balkwill, 2000 Cytokines are soluble mediators of intercellular communication They contribute to a chemical signalling language that regulates development tissue repair haemopoiesis inflammation and the immune response Potent cytokine polypeptides have pleiotropic activities and functional redundancy They act in a complex network where one cytokine can influence the production of and response to many other cytokines In the past five years this bewildering array of more than 100 effector molecules and associated cell surface receptors has been simplified by study of cytokine and cytokine receptor structure elucidation of convergent intracellular signalling pathways and molecular genetics and targeted gene disruption to knock out production of individual cytokines in mice It is also now clear that the pathophysiology of infectious autoimmune and malignant disease can be partially explained by the induction of cytokines and the subsequent cellular response Viral homologues exist for many cytokines and receptors and genetic variations in cytokine production may influence response to pathogenic stimuli Cytokine and cytokine antagonists have shown therapeutic potential in a number of chronic and acute diseases The Cytokine Network Frontiers in Molecular Biology is not a survey of individual cytokines but guides the reader through the latest research on the cytokine network as a whole covering genomics signalling pathways control of the immune response and therapeutics **Nutrition and Immune Function** Philip C.

Calder, 2002-01-01 This text provides a review of the roles of specific nutrients in maintaining the immune response and host protection against infection It also considers the influence of various factors such as exercise and ageing on the interaction between nutrition and immune function **Cellular and Cytokine Networks in Tissue Immunity** International Union of Reticuloendothelial Societies. International Congress, 1991 This compilation examines the defensive role of cellular and

cytokine networks responding to injury infection or inflammation of different tissue such as the brain epithelium intestinal tract and respiratory tract It covers the complex actions of diverse cytokines including human interleukin 9 interleukin 11

Growth and Lactogenic Hormones L. Matera,R. Rapaport,2002-04-18 For more than seventy years evidence has accumulated documenting the existence of a bi directional communication network between growth hormone and the immune system In the past twenty years there has been a tremendous proliferation of information detailing the workings of the growth hormone and insulin like growth factor axis A multitude of growth factors and binding proteins have been identified More and more evidence supporting the important role of the growth hormone IGF network in the well functioning of the normal immune system has been documented Clearly the challenge today is not to prove but to understand the neuroimmune regulatory role of GLH in its entire complexity The ultimate goal of this volume and of all the other volumes of this series is to promote the understanding of the science and to ease human suffering

Invertebrate Cytokines and the Phylogeny of Immunity Alain Beschin,Werner E. G. Müller,2012-12-06 Based on the assumption that invertebrates as well as vertebrates possess factors regulating hematopoiesis response to infection or wounding studies dealing with the evolution of immunity have focused on the isolation and characterization of putative cytokine related molecules from invertebrates Until recently most of our knowledge of cytokine and cytokine receptor like molecules in invertebrates has relied on functional assays and similarities at the physicochemical level As such a phylogenetic relationship between invertebrate cytokine like molecules and invertebrate counterparts could not be convincingly demonstrated In the present book recent studies demonstrating cytokine like activities and related signaling pathways in invertebrates are critically reviewed focusing on findings from molecular biology and taking advantage of the completion of the genome from the fly *Drosophila* and the worm *Caenorhabditis elegans*
