Cytokines And Cell Homeostasis In The Gastrointestinal Tract:

Cytokines and Cell Homeostasis in the Gastrointestinal Tract T. Andus, 2000-11-30 The gastrointestinal tract has a number of unique features Its extensive surface is formed by a single layer of rapidly renewing cells the intestinal epithelial cells These cells are in contact with a number of other cell populations including the largest part of the immune system and with an excessive luminal antigen load including vast numbers of bacteria Furthermore two more organs namely liver and pancreas are part of the system The rapid renewal of the epithelial layer the interactions of different cell types and the balance between cell proliferation and death have been fascinating subjects of studies in recent years Much has been learned and cytokines have emerged as important mediators for all these interactions and homeostatic systems This book the proceedings of the Falk Symposium 113 on Cytokines and Cell Homeostasis in the Gastrointestinal Tract held in Regensburg Germany 16 18 September 1999 provides a forum for basic scientists and interested clinicians to exchange ideas to discuss concepts and to plan further studies Cytokines and Intestinal Mucosal Immunity Fabio Cominelli, Theresa T. Immunoregulatory Mechanisms of Interferon Jorg Hermann Fritz, Claudia U. Duerr, 2020-03-11 Interferons IFN belong to the family of cytokines and have been described first in the late 1950s as an inhibitory factor of viral replication Since then the impact of interferon has been greatly expanded and its function comprises a role not only in different types of infection cancer and autoimmunity but importantly also in immunohomeostasis IFN have important anti viral effects but it is becoming more and more evident that they are true immunomodulators and have an important impact on the development and maintenance of innate and adaptive immunity

The Role of Inflammation and Immune Control in Digestive Disease and Therapeutic Approaches Shuai Wang,Liu Changhui,Zhenhua Li ,Wenyi Gu,2025-05-29 Digestive system diseases including gastroenteritis irritable bowel syndrome Crohn s disease ulcerative colitis hepatitis and pancreatitis present as a common disease that affects millions of people worldwide The pathogenesis of these diseases remains as a complex context involving multiple factors such as genetics environment lifestyle microbiome and immune system Recently multi omics analysis strategies raised much concern about the proximal and distal cross talks between immunocytes and tissue specific cell types Methods for the diagnosis treatment and prognosis of digestive diseases related to immunity such as stem cell therapies small molecule chemical drugs biologics and phytochemicals have been successively developed and applied However the specific functions and related mechanisms of immune cells such as T cells B cells macrophages and other immune cells in digestive diseases still need further exploration Thus investigating the potential and promising immunomodulatory targets would help us uncover the initiation and development of molecular events of immune disorders in digestive system diseases which in turn would promote their prevention and treatment The goal of this Research Topic is to provide a forum to advance research on the comprehensive understanding of immune regulatory mechanisms and the role of abnormal mechanisms in the occurrence and development of digestive diseases as well as to explore innovative immune oriented drugs or treatment interventions in the attempt to achieve a beneficial impact on the diagnosis prevention therapy and prognosis of digestive diseases Bullet points are as below

- 1 The specific functions and clinical significance of immune cells e g T cells B cells macrophages and other immune cells etc in digestive diseases
- 2 The mechanism of immune cells participate in inflammatory reactions and tissue damage in digestive diseases
- 3 The mechanism of regulators affecting the inflammatory response of the digestive system e g nuclear receptor membrane receptor pathway etc
- 4 The role of small molecules in digestive diseases e g cytokines chemical factors anti inflammatory agents immune regulatory molecules etc
- 5

Development of novel anti inflammatory and immunomodulatory drugs for digestive diseases Bibliometric studies are outside of the scope of this section and may be rejected or redirected to other journals sections as appropriate Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease such as inflammatory disease are not in scope unless they have a strong focus on the immune system

Regulation of Immunity by Non-Immune Cells Kenji Kabashima, Teruki Dainichi, Ivaylo Ivanov
Ivanov, Yoshiyuki Goto, 2021-11-08 *Immunology of the GI Tract* Luis Rodrigo, 2022-12-21 The intestine is the largest digestive organ in the human body and one of the largest organs in contact with the outside world In addition to digesting food to facilitate the absorption of nutrients it has a variety of other functions including the transmission of information and regulation of the metabolism Due to its unique structure the intestine is constantly exposed to various antigens and microbes To protect the body from pathogens while also maintaining a stable environment the human intestinal tract has evolved unique regional immune characteristics maintained by the mature intestinal mucosal immune system This intricate system involves intestinal epithelial cells and intestinal lymphoid tissue composed of Peyer's patches isolated lymphoid follicles mesenteric lymph nodes and so on The congenital and adaptive immune mechanisms created by the unique structure function and microenvironment of the intestine differ from those of the central and peripheral immune organs forming the regional immunity of the intestine Intestinal flora also plays an important role in maintaining intestinal homeostasis altering the structure and function of the immune system reshaping the immune microenvironment and promoting interference with the development of specific diseases In fact the immune function of the intestinal region directly affects the development of many intestine specific diseases However the integrity of this function depends on the expression of congenital genes and the regulation of the neuroendocrine system The microenvironment created by intestinal flora and its products also affects the immunity of the intestinal region In early life appropriate intestinal colonization by specific microflora stimulates the maturation of the intestinal mucosa associated lymphoid tissue If the appropriate intestinal flora fails to form during this life stage the function of the intestinal immune system becomes impaired leading to increased incidence and or morbidity of certain intestinal diseases including ulcerative colitis Crohn's disease and others

Physical and Biological Barriers at the Interface Between the Gut Microbiome and the Immune System Marika Falcone, Martina Antonini
Cencicchio, 2025-07-18 The gut environment is fundamental to the modulation of innate and adaptive immunity not only in the intestinal mucosa but systemically Immune cells constantly circulate through the intestinal tissue and gut associated lymphoid tissue GALT where their phenotype and function are regulated by several factors including but not limited to the commensal gut microbiota The host microbiome interaction and the role of the gut microbiota in modulating innate and adaptive immunity in the intestinal mucosa and systemically has been amply described in recent literature and reviews This

contributed volume instead explores the cutting edge concept that gut microbiota composition is only one of the actors in intestinal immune regulation and that several other factors both genetic and environmental modulate innate and adaptive immunity within the intestine Each chapter in this volume addresses the various intestinal factors modulating immunity including food components endogenous metabolites biological gut barrier components and enteric neuroimmune circuits individually and within the context of their integration with systemic components affecting immune cell phenotypes and function In addition it will more broadly address the role of the physical and biological barriers as key players in the interaction between immune cells and the intestinal environment including coverage of cutting edge in vivo technologies that have allowed the characterization of these interactions The final chapters are dedicated to understanding how gut environment modifications are involved and can be therapeutically manipulated in different diseases settings including targeting the gut environment to regular response in anti tumor immunity fighting infections and controlling autoimmune diseases

Changes in T Cell Populations and Cytokine Production in SARS-CoV-2 Infected Individuals; Their Role in Prognosis Athanasia Mouzaki,Rupesh K. Srivastava,Ahmed Abdul Quadeer,2025-07-30 At the time of writing this call for papers for the special issue Changes in T cell populations and cytokine production in SARS CoV 2 infected individuals their role in prognosis June 10 2022 over 534 million people have been infected with SARS CoV 2 virus of whom over 6 3 million have died Early studies of COVID 19 reported that infection with SARS CoV 2 results in dysregulation of the immune and hematopoietic systems manifested by lymphopenia increased numbers of hyperactivated neutrophils and NK cells and the development of tolerogenic APCs that suppress T cell mediated immunity In patients with COVID 19 lymphopenia mainly due to depletion of effector T cells with a concomitant decrease in regulatory T cells Tregs accompanied by significant upregulation of cytokines IL 1 IL 6 TNF IL 10 and chemokines MCP1 IP 10 MIP1A MIP1B have been associated with a poor outcome The continued evolution of SARS CoV 2 including the rapid accumulation of viral mutations to the point that new viral variants with different characteristics are emerging has led to great concern about the ability of these variants to evade the immune response triggered by natural infection and or vaccination The recent wave of infection has been caused by the omicron variant B 1 1 529 which has 5 sublineages BA 1 5 that differ in the number of mutations in the spike protein and by the emerging deltacron variant which resulted from recombination of the omicron with the delta B 1 617 2 variant The rapid international spread of emerging variants with mutations associated with escape from vaccine induced immunity poses a major challenge for pandemic control and prevention of COVID 19 Important questions have been raised about the impact of SARS CoV 2 variants on transmissibility disease severity the effectiveness of existing COVID 19 vaccines in preventing severe disease humoral response and the role of T cell immunity in vaccinated individuals Recent studies have shown that heavy mutations in the spike protein of the SARS CoV 2 omicron and deltacron variants have resulted in their ability to evade spike specific neutralizing antibodies however their effect on cellular immunity including cross reactive T cells generated by

vaccination or natural infection is less clear Detailed studies linking humoral and cellular immunity to the COVID 19 outcome will be useful for uncovering prognostic biomarkers and developing future vaccines We welcome research papers on immune system involvement in COVID 19 including but not limited to the following topics The role of immune cells and cytokines in COVID 19 Immune biomarkers for COVID 19 *Intestinal Dysbiosis in Inflammatory Diseases* Gislane Lelis Vilela de Oliveira,Alessio Fasano,Veena Taneja,Cristina Ribeiro De Barros Cardoso,2021-09-29 Dr Fasano holds stocks in Alba Therapeutics and receives financial support from Takeda Pharmaceuticals Dr Taneja receives financial support from Elysium Health and Evelo Biosciences The other Topic Editors declare no competing interests with regards to the Research Topic subject *Issues in Gastroenterology and Hepatology: 2011 Edition* ,2012-01-09 *Issues in Gastroenterology and Hepatology 2011 Edition* is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Gastroenterology and Hepatology The editors have built *Issues in Gastroenterology and Hepatology 2011 Edition* on the vast information databases of ScholarlyNews You can expect the information about Gastroenterology and Hepatology in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of *Issues in Gastroenterology and Hepatology 2011 Edition* has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com>
