Blocking Technique Weighted Mean Operators And Hardy's Inequality:

The Blocking Technique, Weighted Mean Operators and Hardy's Inequality Karl-Goswin

Grosse-Erdmann,2006-11-14 This book presents the first comprehensive treatment of the blocking technique which consists in transforming norms in section form into norms in block form and vice versa Such norms appear throughout analysis The blocking technique is a powerful yet elementary tool whose usefulness is demonstrated in the book In particular it is shown to lead to the solution of three recent problems of Bennett concerning the inequalities of Hardy and Copson The book is addressed to researchers and graduate students An interesting feature is that it contains a dictionary of transformations between section and block norms and will thus be useful to researchers as a reference text The book requires no knowledge beyond an introductory course in functional analysis

Regular Variation and Differential Equations Vojislav

Maric,2000-03-27 This book constitutes the refereed proceedings of the Third Pacific Asia Conference on Knowledge Discovery and Data Mining PAKDD 99 held in Beijing China in April 1999 The 29 revised full papers presented together with 37 short papers were carefully selected from a total of 158 submissions The book is divided into sections on emerging KDD technology association rules feature selection and generation mining in semi unstructured data interestingness surprisingness and exceptions rough sets fuzzy logic and neural networks induction classification and clustering visualization causal models and graph based methods agent based and distributed data mining and advanced topics and new methodologies

Power Sums, Gorenstein Algebras, and Determinantal Loci Anthony Iarrobino,Vassil

Kanev,1999-12-15 This book treats the theory of representations of homogeneous polynomials as sums of powers of linear forms The first two chapters are introductory and focus on binary forms and Waring's problem Then the author's recent work is presented mainly on the representation of forms in three or more variables as sums of powers of relatively few linear forms The methods used are drawn from seemingly unrelated areas of commutative algebra and algebraic geometry including the theories of determinantal varieties of classifying spaces of Gorenstein Artin algebras and of Hilbert schemes of zero dimensional subschemes Of the many concrete examples given some are calculated with the aid of the computer algebra program Macaulay illustrating the abstract material The final chapter considers open problems This book will be of interest to graduate students beginning researchers and seasoned specialists Prerequisite is a basic knowledge of commutative algebra and algebraic geometry

The Red Book of Varieties and Schemes David Mumford,1999-09-17 Mumford's

famous Red Book gives a simple readable account of the basic objects of algebraic geometry preserving as much as possible their geometric flavor and integrating this with the tools of commutative algebra It is aimed at graduates or mathematicians in other fields wishing to quickly learn about algebraic geometry This new edition includes an appendix that gives an overview of the theory of curves their moduli spaces and their Jacobians one of the most exciting fields within algebraic geometry

Steffen, 1999-10-19 The international summer school on Calculus of Variations and Geometric Evolution Problems was held at Cetraro Italy 1996 The contributions to this volume reflect quite closely the lectures given at Cetraro which have provided an image of a fairly broad field in analysis where in recent years we have seen many important contributions Among the topics treated in the courses were variational methods for Ginzburg Landau equations variational models for microstructure and phase transitions a variational treatment of the Plateau problem for surfaces of prescribed mean curvature in Riemannian manifolds both from the classical point of view and in the setting of geometric measure theory

Bond markets differ in one fundamental aspect from standard stock markets While the latter are built up to a finite number of trade assets the underlying basis of a bond market is the entire term structure of interest rates an infinite dimensional variable which is not directly observable On the empirical side this necessitates curve fitting methods for the daily estimation of the term structure Pricing models on the other hand are usually built upon stochastic factors representing the term structure in a finite dimensional state space Written for readers with knowledge in mathematical finance in particular interest rate theory and elementary stochastic analysis this research monograph has threefold aims to bring together estimation methods and factor models for interest rates to provide appropriate consistency conditions and to explore some important examples Seminaire de Probabilites XXXV J. Azema, M. Emery, M. Ledoux, M. Yor, 2001-04-10 Researchers and

graduate students in the theory of stochastic processes will find in this 35th volume some thirty articles on martingale theory martingales and finance analytical inequalities and semigroups stochastic differential equations functionals of Brownian motion and of Lévy processes Ledoux's article contains a self contained introduction to the use of semigroups in spectral gaps and logarithmic Sobolev inequalities the contribution by Emery and Schachermayer includes an exposition for probabilists of Vershik's theory of backward discrete filtrations **Quantization and Non-holomorphic Modular Forms** André

Unterberger, 2000-08-28 This is a new approach to the theory of non holomorphic modular forms based on ideas from quantization theory or pseudodifferential analysis Extending the Rankin Selberg method so as to apply it to the calculation of the Roelcke Selberg decomposition of the product of two Eisenstein series one lets Maass cusp forms appear as residues of simple Eisenstein like series Other results based on quantization theory include a reinterpretation of the Lax Phillips

The Cauchy-Schwarz Master Class J. Michael Steele, 2004-04-26 This lively problem oriented text first published in 2004 is designed to coach readers toward mastery of the most fundamental mathematical inequalities With the Cauchy Schwarz inequality as the initial guide the reader is led through a sequence of fascinating problems whose solutions are presented as they might have been discovered either by one of history's famous mathematicians or by the reader The problems emphasize beauty and surprise but along the way readers will find systematic coverage of the geometry of squares convexity the ladder of power means majorization Schur convexity exponential sums and the inequalities of Hölder Hilbert and Hardy The text is accessible to anyone who knows calculus and who cares about solving problems It is well suited to self study directed study or as a supplement to courses in analysis probability and combinatorics
