The Automotive Body L. Morello,Lorenzo Rosti Rossini,Giuseppe Pia,Andrea Tonoli,2011-03-04 The Automotive Body consists of two volumes The first volume produced the needful cultural background on the body it described the body and its components in use on most kinds of cars and industrial vehicles the quantity of drawings that are presented allows the reader to familiarize with the design features and to understand functions design motivations and fabrication feasibility in view of the existing production processes The purpose of this second volume is to explain the links which exist between satisfying the needs of the customer either driver or passenger and the specifications for vehicle design and between the specifications for vehicle system and components For this study a complete vehicle system must be considered including according to the nature of functions that will be discussed more component classes than considered in Volume I and sometimes also part of the chassis and the powertrain These two books about the vehicle body may be added to those about the chassis and are part of a series sponsored by ATA the Italian automotive engineers association on the subject of automotive engineering they follow the first book published in 2005 in Italian only about automotive transmission They cover automotive engineering from every aspect and are the result of a five year collaboration between the Polytechnical University of Turin and the University of Naples on automotive engineering Construction Equipment Guide David A. Sanchez,2000 This project aimed to develop a methodology for evaluating performance and acceptability characteristics of the pressurized crew module volume suitability for zero gravity g ingress of a spacecraft and to evaluate the operational acceptability of the NASA crew return vehicle CRV for zero g ingress of astronaut crew volume for crew tasks and general crew module and seat layout No standard or methodology has been established for evaluating volume acceptability in human spaceflight vehicles Volume affects astronauts ability to ingress and egress the vehicle and to maneuver in and perform critical operational tasks inside the vehicle Much research has been conducted on aircraft ingress egress and rescue in order to establish military and civil aircraft standards However due to the extremely limited number of human rated spacecraft this topic has been unaddressed The NASA CRV was used for this study The prototype vehicle can return a 7 member crew from

the International Space Station in an emergency The vehicle s internal arrangement must be designed to facilitate rapid zero g ingress zero g maneuverability ease of one g egress and rescue and ease of operational tasks in multiple acceleration environments A full scale crew module mockup was built and outfitted with representative adjustable seats crew equipment and a volumetrically equivalent hatch Human factors testing was conducted in three acceleration environments using ground based facilities and the KC 135 aircraft Performance and acceptability measurements were collected Data analysis was conducted using analysis of variance and nonparametric techniques Federal Motor Vehicle Safety Standards and Regulations United States.
