1997 12th Annual Conference On Computer Assurance Compass:

Journal of Research of the National Institute of Standards and Technology, 1997 *Computer Safety, Reliability, and Security* Bettina Buth, Gerd Rabe, Till Seyfarth, 2009-09-03 Computer based systems have become omnipresent commodities within our environment. While for a large variety of these systems such as transportation systems, nuclear or chemical plants or medical systems, their relation to safety is obvious, we often do not reflect that others are as directly related to risks concerning harm done to persons or matter as for example elevator control or mobile phones. At least we are not aware of the risk in our daily use of them. Safecomp as a community and a conference series has accompanied this development for 30 years up to Safecomp 2009 which was the 28th of the series. During this time the topics and methods as well as the community have undergone changes. These changes reflect the requirements of the above mentioned ubiquitous presence of safety related systems. Safecomp has always encouraged and will further encourage academia and industry to share and exchange their ideas and experiences. After 30 years we as the organizers of Safecomp 2009 found it imperative to take stock which methods found their way into the application areas which new approaches need to be checked for their practical applicability. As different application domains developed their own approaches over the previous decades we tried to attract people with different backgrounds for this conference though the years 2008 and 2009 were not easy with regard to the overall global economic situation we succeeded with this goal.

Information Assurance in Computer Networks: Methods, Models and Architectures for Network Security Vladimir I. Gorodetski, Victor A. Skormin, Leonard J. Popyack, 2003-06-29 This book presents the refereed proceedings of the International Workshop on Mathematical Methods, Models and Architectures for Network Security Systems (MMM ACNS 2001) held in St. Petersburg in May 2001. The 24 revised full papers presented together with five invited contributions were carefully reviewed and selected from 36 submissions. The papers are organized in topical sections on network security systems foundations, models and architectures, intrusion detection foundations and models, access control, authentication and authorization, and cryptography and steganography, mathematical basis, protocols and applied methods.

Computer Aided Verification Alan J. Hu, 1998-06-03 This book constitutes the refereed proceedings of the 10th International Conference on Computer Aided Verification (CAV 98) held in Vancouver, BC, Canada in June/July 1998. The 33 revised full papers and 10 tool papers presented were carefully selected from a total of 117 submissions. Also included are 11 invited contributions. Among the topics covered are modeling and specification formalisms, verification techniques like state space exploration, model checking, synthesis, and automated deduction, various verification techniques, applications and case studies, and verification in practice.

Nuclear Power Pavel Tsvetkov, 2011-09-06 At the onset of the 21st century we are searching for reliable and sustainable energy sources that have a potential to support growing economies, developing at accelerated growth rates, technology advances, improving quality of life, and becoming available to larger and larger populations. The quest for robust sustainable energy supplies meeting the above constraints

leads us to the nuclear power technology Today's nuclear reactors are safe and highly efficient energy systems that offer electricity and a multitude of co-generation energy products ranging from potable water to heat for industrial applications Catastrophic earthquake and tsunami events in Japan resulted in the nuclear accident that forced us to rethink our approach to nuclear safety requirements and facilitated growing interests in designs which can withstand natural disasters and avoid catastrophic consequences This book is one in a series of books on nuclear power published by InTech It consists of ten chapters on system simulations and operational aspects Our book does not aim at a complete coverage or a broad range Instead the included chapters shine light at existing challenges solutions and approaches Authors hope to share ideas and findings so that new ideas and directions can potentially be developed focusing on operational characteristics of nuclear power plants The consistent thread throughout all chapters is the system thinking approach synthesizing provided information and ideas The book targets everyone with interests in system simulations and nuclear power operational aspects as its potential readership groups students researchers and practitioners

Trust, Privacy and Security in Digital Business Steven Furnell, Costas Lambrinoudakis, Günther Pernul, 2011-08-19 This book constitutes the refereed proceedings of the 8th International Conference on Trust and Privacy in Digital Business TrustBus 2011 held in Toulouse France in August September 2011 in conjunction with DEXA 2011 The 18 revised full papers presented were carefully reviewed and selected from numerous submissions The papers are organized in the following topical sections identity and trust management security and privacy models for pervasive information systems reliability and security of content and data authentication and authorization in digital business intrusion detection and information filtering management of privacy and confidentiality and cryptographic protocols usability of security

Verified Software: Theories, Tools, Experiments Bertrand Meyer, James Woodcock, 2008-07-07 A Step Towards Verified Software Worries about the reliability of software are as old as software itself techniques for allaying these worries predate even James King's 1969 thesis on A program verifier What gives the whole topic a new urgency is the conjunction of three phenomena the blitz like spread of software rich systems to control ever more facets of our world and our lives our growing impatience with deficiencies and the development proceeding more slowly alas than the other two trends of techniques to ensure and verify software quality In 2002 Tony Hoare one of the most distinguished contributors to these advances over the past four decades came to the conclusion that piecemeal efforts are no longer sufficient and proposed a Grand Challenge intended to achieve over 15 years the production of a verifying compiler a tool that while processing programs would also guarantee their adherence to specified properties of correctness robustness safety security and other desirable properties As Hoare sees it this endeavor is not a mere research project as might normally be carried out by one team or a small consortium of teams but a momentous endeavor comparable in its scope to the successful mission to send a man to the moon or to the sequencing of the human genome

Fundamental Approaches to Software Engineering

Stefania Gnesi, Arend Rensink, 2014-03-21 This book constitutes the proceedings of the 17th International Conference on Fundamental Approaches to Software Engineering FASE 2014 held as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2014 which took place in Grenoble France in April 2014 The 28 papers included in this volume together with one invited talk were carefully reviewed and selected from 125 submissions They have been organized in topical sections on modeling and model transformation time and performance static analysis scenario based specification software verification analysis and repair verification and validation graph transformation and debugging and testing

Software Engineering - ESEC/FSE '99 Oskar Nierstrasz, Michel Lemoine, 2003-05-21 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engineering FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and encourages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of colocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research papers a quarter as experience papers and the rest as both research and experience papers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations **Proceedings**, 2001

Contracts, Scenarios and Prototypes Reinhold Plöesch, 2011-06-27 What is this Book About At the beginning of the 21st century computer systems and especially so ware play an important role in our society Software is contained in virtually every technical device that we use in everyday life e g cellular phones and cars Furthermore computers and their software are used for leisure purposes at home the Internet and computer games at the office e g writing letters and order processing and for more complicated tasks such as controlling steel plants or insuring flight safety Therefore the quality of software e g its correctness reliability and efficiency has become important not only in the context of critical systems e g nuclear power plants but also for our entire society from business to leisure Software engineering is the practical application of scientific knowledge for the economical production and use of high quality software Pomberger 96 The discipline aims at developing methods techniques tools and standards to fulfill these aims The number of methods and tools available to the software engineer nowadays is overwhelming nevertheless many software projects fail that is do not meet their schedules are over

budget do not meet the user needs or simply have considerable quality defects The numerous possible explanations for this situation include poor project management unsuitable methods and tools used in the project and poorly developed skills of the participating software engineers

Stochastic Models for Fault Tolerance Katinka Wolter, 2010-06-17 As modern society relies on the fault free operation of complex computing systems system fault tolerance has become an indispensable requirement Therefore we need mechanisms that guarantee correct service in cases where system components fail be they software or hardware elements Redundancy patterns are commonly used for either redundancy in space or redundancy in time Wolter's book details methods of redundancy in time that need to be issued at the right moment In particular she addresses the so called timeout selection problem i e the question of choosing the right time for different fault tolerance mechanisms like restart rejuvenation and checkpointing Restart indicates the pure system restart rejuvenation denotes the restart of the operating environment of a task and checkpointing includes saving the system state periodically and reinitializing the system at the most recent checkpoint upon failure of the system Her presentation includes a brief introduction to the methods their detailed stochastic description and also aspects of their efficient implementation in real world systems The book is targeted at researchers and graduate students in system dependability stochastic modeling and software reliability Readers will find here an up to date overview of the key theoretical results making this the only comprehensive text on stochastic models for restart related problems
