Alternatives To Cognition A New Look At Explaining Human Social Behavior:

Alternatives to Cognition Christina Lee, 1998 In this provocative book Christina Lee takes a consciously critical approach to the apparently unchallenged principle that conscious thought is the cause of all human behavior Without becoming polemical or destructive she reconsiders a wide range of issues in mainstream American and European social psychology Suitable for an international audience the book deals with issues in mainstream American and European social psychology It assumes some familiarity with contemporary social and applied psychology and would be appropriate as a text or supplementary reading for senior undergraduate and postgraduate courses in social psychology and psychological theory although it is also written with an academic research audience in mind While it is written largely for psychologists it would also be of interest to academics from other social science disciplines with a general interest in explanations of individual social behavior

Evolutionary Psychology and Information Systems Research Ned Kock, 2010-07-28 This book is a compilation of chapters written by leading researchers from all over the world Those researchers common characteristic is that they have investigated issues at the intersection of the elds of information systems IS and evolutionary psychology EP The main goal of this book is to serve as a reference for IS research building on EP concepts and theories in short IS EP research The book is organized in three main parts Part I focuses on EP concepts and theories that can be used as a basis for IS EP research Part II provides several exemplars of IS EP research in practice and Part III summarizes emerging issues and debate that can inform IS EP research including debate regarding philosophical foundations and credibility of related findings IS EP research is generally concerned with the use of concepts and theories from EP in the study of IS particularly regarding the impact of modern information and communication technologies on the behavior of individuals groups and organizations From a practitioners perspective the most immediate consumers of IS EP research are those who develop and use IS of which

a large contingent are in businesses that employ IS to support marketing order taking production and delivery of goods and services In this context IS EP ndings may be particularly useful due to the present need to design web based interfaces that will be used by individuals from different cultures and often different countries and whose common denominator is their human nature

Organizational Behavior Fred Luthans, Brett C. Luthans, Kyle W. Luthans, 2021-01-01 Contrary to the common saying we do want you to judge this new edition of Organizational Behavior by its front cover Specifically featured is that this is the 14th edition it takes an Evidence Based Approach and similar to the previous edition there are now three Luthans authors This 14th edition is based on the foundation provided by the first mainline text which has become the classic for the study and understanding of organizational behavior However by taking an evidence based approach this insures that even though a classic this new edition adds the most recent and relevant research to the most extensive up to date reference base of any organizational behavior text By adding the two closely related authors professor sons literally pumps new blood into the sustainability of this classic text by Fred Luthans Importantly Fred has recently been recognized with 1 Lifetime Achievement Award in Organizational Behavior 2 Top 1% of Citation Count of all researchers in the world and 3 the 1 most cited author in Organizational Behavior textbooks Finally this new edition recognizes that even though the theoretical framework and coverage largely remains the context of organizational behavior is rapidly changing This new edition reflects the New Age environment but still holds to the premise that in today s organizations success and competitive advantage still comes from the understanding prediction and effective management of human resources With this new edition we invite you to continue the never ending journey guided by the best organizational behavior theory research and application

The Behavior Analyst ,1999 **Anatomy of a Train Wreck** Ruth Leys,2024-12-05 A history of priming research that analyzes the field s underlying assumptions and experimental protocols to shed new light on a contemporary crisis in social psychology In 2012 a team of Belgian scientists reported that they had been unable to replicate a canonical experiment in the field of psychology known as priming The original experiment performed by John Bargh in the nineties had purported to show that words connoting old age unconsciously influenced or primed research subjects causing them to walk more slowly When subsequent researchers could not replicate these results Nobel winning psychologist Daniel Kahneman warned of a train wreck looming if Bargh and his colleagues could not address doubts about their work Since then the inability to replicate other well known priming experiments has helped precipitate an ongoing debate over what has gone wrong in psychology raising fundamental questions about the soundness of research practices in the field Anatomy of a Train Wreck offers the first detailed history of priming research from its origins in the early 1980s to its recent collapse Ruth Leys places priming experiments in the context of contemporaneous debates over not only the nature of automaticity but also the very foundations of social psychology While these latest discussions about priming have largely focused on methodology including

sloppy experimental practices inadequate statistical methods and publication bias Leys offers a genealogy of the theoretical expectations and scientific paradigms that have guided and motivated priming research itself Examining scientists intellectual strategies their responses to criticism and their assumptions about the nature of subjectivity Anatomy of a Train Wreck raises crucial questions about the evidence surrounding unconscious influence and probes the larger stakes of the replication crisis psychology's status as a science

Handbook of Motivation and Cognition Across Cultures Richard Sorrentino, Susumu Yamaguchi, 2011-04-28 In recent years there has been a wealth of new research in cognition particularly in relation to supporting theoretical constructs about how cognitions are formed processed reinforced and how they then affect behavior Many of these theories have arisen and been tested in geographic isolation It remains to be seen whether theories that purport to describe cognition in one culture will equally prove true in other cultures The Handbook of Motivation and Cognition Across Cultures is the first book to look at these theories specifically with culture in mind The book investigates universal truths about motivation and cognition across culture relative to theories and findings indicating cultural differences Coverage includes the most widely cited researchers in cognition and their theories as seen through the looking glass of culture The chapters include self regulation by Tory Higgins unconscious thought by John Bargh attribution theory by Bernie Weiner and self verification by Bill Swann among others The book additionally includes some of the best new researchers in cross cultural psychology with contributors from Germany New Zealand Japan Hong Kong and Australia In the future culture may be the litmus test of a theory before it is accepted and this book brings this question to the forefront of cognition research Includes contributions from researchers from Germany New Zealand Japan Hong Kong and Australia for a cross cultural panel Provides a unique perspective on the effect of culture on scientific theories and data

Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome

Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a

new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28

Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one's interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging

techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field

Motivation and Self-regulation in Sport and Exercise Chris Englert, Ian Taylor, 2021-06-06 The ability to effectively use one's thoughts emotions and motivation to enhance performance and well being is one of the most important skills in sport and exercise contexts Motivation and Self Regulation in Sport and Exercise explores the theories research and processes that underpin these self regulatory and motivational processes A deeper understanding of motivation and self regulation has far reaching implications from helping individuals to begin an active lifestyle to seasoned athletes looking for a competitive edge For the first time the globally leading researchers in this research field come together to provide their unique cutting edge insight into how to exercise or perform more effectively In doing so the book provides new insight into established theories of motivation and self regulation but also breaks new ground by inspecting lesser known or emerging paradigms This book is intended for all scholars interested in self regulation and motivation from undergraduate students to experienced researchers as well as practicing sport and exercise psychologists coaches and athletes
