Proceedings of the 14th European Microscopy Congress held in Aachen Germany 1 5 September 2008 Jointly organised by the European Microscopy Society EMS the German Society for Electron Microscopy DGE and the local microscopists from RWTH Aachen University and the Research Centre Jülich the congress brings together scientists from Europe and from all over the world The scientific programme covers all recent developments in the three major areas of instrumentation and methods materials science and life science Exploring the Boundaries of Law Ana Margarida Gaudêncio,2025-03-26 This book presents a pluri dimensional approach to today's most relevant perspectives on the boundaries of Law both in terms of its creation and performance in order to discuss its current meaning and role as a normative order To do so it presents a broad range of standpoints concerning philosophical theoretical juridical political dogmatic and methodological issues and proposes new bases for the construction and effectiveness of legal statements and decisions from those issued by juridical political organisations to those taken by judges In addition it sheds new light on discussions concerning the juridical and political role of Law in connection with public policy and democracy related issues especially contemporary debates between International Law and Human Rights Law on the one hand and between Public Law and Private Law on the other **Mathematical Aspects of Paradoxes in Cosmology** Michal Křížek,Lawrence Somer,2023-07-05 This book provides a mathematical and numerical analysis of many problems which lead to paradoxes in contemporary cosmology in particular the existence of dark matter and dark energy It is shown that these hypothetical quantities arise from excessive extrapolations of simple mathematical models to the whole physical universe Written in a completely different style to most books on General Relativity and cosmology the important results take the form of mathematical theorems with precise assumptions and statements All theorems are followed by a corresponding proof or an exact reference to the proof Some nonstandard topics are also covered including violation of the causality principle in Newtonian mechanics a critical mathematical and numerical analysis of Mercury's perihelion shift inapplicability of Einstein's equations to the classical two body problem due to computational complexity non uniqueness of the notion of universe the topology of the universe various descriptions of a hypersphere regular tessellations of hyperbolic spaces local Hubble expansion of the universe neglected gravitational redshift in the detection of gravitational waves and the possible distribution of mass inside a black hole The book also dispels some myths appearing in the theory of relativity and in contemporary cosmology For example although the hidden assumption that Einstein's equations provide a good description of the evolution of the whole universe is considered to be obvious it is just a null hypothesis which has not been verified by any experiment

and has only been postulated by excessive extrapolations of many orders of magnitude

Advances in next generation sequencing technologies NGS are revolutionizing the field of food microbiology Microbial whole genome sequencing WGS can provide identification characterization and subtyping of pathogens for epidemiological investigations at a level of precision previously not possible This allows for connections and source attribution to be inferred between related isolates that may be overlooked by traditional techniques The archiving and global sharing of genome sequences allow for retrospective analysis of virulence genes antimicrobial resistance markers mobile genetic elements and other novel genes The advent of high throughput 16S rRNA amplicon sequencing in combination with the advantages offered by massively parallel second generation sequencing for metagenomics enable intensive studies on the microbiomes of food products and the impact of foods on the human microbiome These studies may one day lead to the development of reliable culture independent methods for food monitoring and surveillance Similarly RNA seq has provided insights into the transcriptomes and hence the behaviour of bacterial pathogens in food food processing environments and in interaction with the host at a resolution previously not achieved through the use of microarrays and or RT PCR The vast untapped potential applications of NGS along with its rapidly declining costs give this technology the ability to contribute significantly to consumer protection global trade facilitation and increased food safety and security Despite the rapid advances challenges remain How will NGS data be incorporated into our existing global food safety infrastructure How will massive NGS data be stored and shared globally What bioinformatics solutions will be used to analyse and optimise these large data sets This Research Topic discusses recent advances in the field of food microbiology made possible through the use of NGS

Epidemiology of Antimicrobial Resistance and Virulence Factors of Emerging and Re-emerging bacteria Rosa Del Carmen Rocha-Gracia,Gerardo Cortés Cortés,Manuel Gerardo Ballesteros Monrreal ,Margarita María De La Paz Arenas-Hernandez,Edwin Barrios-Villa,2025-03-20 Infectious diseases caused by bacteria are one of the most important health problems worldwide

This is due to the increase in the prevalence of multidrug resistant bacteria. The increased antibiotic resistance in these pathogens may be related to the inadequate use and abuse of antimicrobials in humans as well as in domestic animals or those destined for consumption. In addition, the virulence characteristics of bacterial pathogens play a transcendental role in the development and persistence of the infectious process, and it has been observed that virulence characteristics such as biofilm or cell invasion also influence therapeutic failure. Both virulence factors and antibiotic resistance determinants are commonly encoded in mobilizable genetic elements which has favored their dissemination and the emergence of highly virulent and antimicrobial resistant bacterial clinical isolates. Both of these properties in co occurrence pose a real challenge in the diagnosis management and treatment of an infectious process. Molecular factors including repressors, operators, enhancers and insertion sequences may be involved in the repression and overexpression of genes or gene clusters and may contribute to the expression levels of virulence and resistance genes.

Vasif Kortun, Hanru Hou, 2003

The rise of globalism has created tremendous challenges to old economic, political and cultural paradigms, and these changes are reflected in artistic practices. Disciplinary boundaries are crossed as easily as geographical ones. How does the new internationalism that we are facing affect aesthetics and artistic production? Is there a link, for example, between the rise of video works and the global availability of the digital medium? Does the global information age facilitate an international language of art and an alternative reading of art history toward art histories? From the perspective of a museum of modern and contemporary art, the institution has to overcome a major contradiction between its mission of permanence and its mission of change. How can cultural institutions contribute to the revamping of their own structures now that the hegemony of Western modernity is being challenged? How can museums connect with new audiences through different practices, different scholarship and different interpretative strategies growing out of the sedimentation of their histories? To invite and encourage such dialogue, *How latitudes become forms* art in a global age looks at current scholarship on globalism and changing curatorial practices and identifies critical models provided by artists themselves. This catalogue features thought provoking essays and conversations by curators, critics and cultural programmers from across the world as well as the multidisciplinary artworks of more than forty visual, film, video, performing and new media artists from Brazil, China, India, Japan, South Africa, Turkey and the United States. book cover
