Structure—Property Relationships in Polymers Charles E. Carraher Jr., R.B. Seymour, 2012-12-06 The first concern of scientists who are interested in synthetic polymers has always been and still is How are they synthesized But right after this comes the question What have I made and for what is it good This leads to the important topic of the structure property relations to which this book is devoted Polymers are very large and very complicated systems their characterization has to begin with the chemical composition configuration and conformation of the individual molecule The first chapter is devoted to this broad objective The immediate physical consequences discussed in the second chapter form the basis for the physical nature of polymers the supermolecular interactions and arrangements of the individual macromolecules The third chapter deals with the important question How are these chemical and physical structures experimentally determined The existing methods for polymer characterization are enumerated and discussed in this chapter The following chapters go into more detail For most applications textiles films molded or extruded objects of all kinds the mechanical and the thermal behaviors of polymers are of preponderant importance followed by optical and electric properties Chapters 4 through 9 describe how such properties are rooted in and dependent on the chemical structure More detailed considerations are given to certain particularly important and critical properties such as the solubility and permeability of polymeric systems Macromolecules are not always the final goal of the chemist they may act as intermediates reactants or catalysts This topic is presented in Chapters 10 and 11

Polymer Syntheses Stanley R. Sandler, Wolf Karo, 2013-10-22 Polymer Syntheses Volume III provides useful polymer synthesis information The book discusses the olefin sulfur dioxide copolymers the polythioesters and sulphide polymers The text also describes polymerization reactions of mono and diisocyanates polyoxyalkylation of hydroxyl compounds and polymerization reactions of N vinyl carbazole and related monomers The polymerization of vinyl acetate and other vinyl esters the polymerization of allyl esters and the polymerization of vinyl fluoride are also considered The book further tackles miscellaneous polymer preparations *Journal of the Indian Chemical Society* Indian Chemical Society, 1975

Carbohydrate Chemistry Yves Queneau, A Pilar Rauter, Thisbe Lindhorst, 2014 Volume 40 of Carbohydrate Chemistry Chemical and Biological Approaches demonstrates the importance of the glycosciences for innovation and societal progress Carbohydrates are molecules with essential roles in biology and also serve as renewable resources for the generation of new chemicals and materials Honouring Professor Andr Lubineau's memory this volume resembles a special collection of contributions in the fields of green and low carbon chemistry innovative synthetic methodology and design of carbohydrate architectures for medicinal and biological chemistry Green methodology is illustrated by accounts on the industrial development of water promoted reactions C glycosylation cycloadditions and the design of green processes and synthons towards sugar based surfactants and materials The especially challenging transformations at the anomeric center are
