[Psychological Significance and Difference Between Tools Use by Humans and Animals](#) P.Y. Galperin, Irina Engeness, Gethin Thomas, 2023-01-01 This book represents the very first so far unpublished translation of Piotr Galperin's 1902 1988 dissertation defended in 1938 during his employment in the All Ukrainian Psycho Neurological Academy AUPA in Kharkiv Ukraine In his candidate dissertation Galperin examined the differences in tool use between humans and animals and argued that there was a fundamental difference between tools developed and used by humans and the auxiliary means used by animals Galperin showed that human use of tools totally differs from the way tools are utilised by animals as an extension of their limbs He suggested that tools created and used by humans encapsulate cultural and historical experience

developed in human practices which have to be mastered Human engagement with these tools reorganise the existing and enhance the development of new psychological functions and that human consciousness originates and develops in the external tool mediated activities The development of new psychological functions stimulates the systemic and meaningful organisation of human consciousness In addition as opposed to animal mind human consciousness undergoes developmental transformations initiated in tools and speech mediated activities Galperin s research reveals the unity of the external tool mediated and the internal psychological activity of humans These findings are influential as they adopted the foundations of the theory of Vygotsky and extended them without changing the essence of Vygotsky s legacy Galperin s dissertation can be considered as a missing jig saw puzzle which connects the legacy of Vygotsky the contribution of Leontiev and their followers who worked in the cultural historical and activity traditions This translation of the dissertation in English makes it available for the cultural historical scholars in the West and provides insights into the invaluable contributions of Piotr Galperin

alike in Kyrgyzstan is consistent with emerging evidence that involving both men and women in gender transformative approaches rather than focusing on women alone may be key to effective and sustainable programs Although impacts on time use were insignificant in the quantitative study the qualitative work pointed out negative impacts emphasizing the unintended consequences of increased workload for women who participate in livelihood interventions

Reviews in Animal Welfare Barbara Padalino ,Edward Narayan,2024-10-04 Animal welfare research is growing although some topics have been studied more in depth than others Pet species and farm animal welfare are better studied than exotic and wildlife species However there are still many gaps in knowledge related to animal welfare For instance there is still the need to understand how to measure positive welfare or how to aggregate the different feelings and experiences that an animal feels during the different stages of life New technologies have been proposed to monitor the welfare of animals providing more objective data but there are still very few tools that have been validated This Research Topic aims to collect reviews of the literature on animal welfare topics related to all species from companion animals to livestock and from laboratory animals to wild animals The invited reviews metanalysis of the literature should highlight the acquired knowledge and the current gaps of knowledge within this field Our main goal is to identify which topics were devoted more scientific attention in recent years concerning animal welfare and identify which topics are still overlooked by current research

Economic Life Beyond Economists Abderrazak Belabes, 2024-08-12 Through an examination of the work of great scholars from fields including philosophy literature philology semiology quantum physics history and anthropology this book argues that building on the contribution of non economists can open new areas of reflection in economics beyond the usual schools of thought The purpose of the book is twofold First it offers a critique and discussion of the limits of contemporary economic discourse both mainstream and self styled alternative theories The central theme on which the book is built is that the discipline of economics fails to examine the nature of social reality in a systematic way This prompts the economists to become fully aware of the methodology on which they base their representation analysis and argumentation in a way that economists currently are not Second the book proposes alternative

ways of thinking that can help readers of economics to overcome the current limitations of their discipline This means going beyond various dominant dualities orthodox heterodox micro macro epistemology ontology because it is not a question of doing the economy differently but of overcoming the economy as a representation of the world that strives to submit everything to its realm Thus the book does not simply propose a broader conceptual framework than that portrayed by mainstream economists or those who propose an alternative approach but raises questions that do not usually come from the minds of economists at all The book will be of particular interest to readers of economic methodology and pluralism philosophers of science and other social scientists interested in methodological issues
