Animals At Home:

Home Ranges of Animals Roger A. Powell, 2025-10-21 Animals have tremendous agency to understand the world around them and to plan how to take best advantage of that world to meet their requirements Their perception of the world differs from humans and includes knowledge emphasizing different senses This book argues that to understand animals home ranges which are integral to the behavior and ecology of animals biologists must understand their cognition of their environments Presenting diverse complementary approaches to studying home ranges this book shows how using multiple approaches sheds a broad light on how and why animals behave as they do The book also provides many examples showing how hypothesis driven research provides strong insights into animal behavior and ecology *Animals at Home* Jane

Burton, *Animal Ways* 1 of 4, 1991 Photographs by Jane Burton and Kim Taylor **Animals at home** Claudia

Boldt, 2017-07-17 **Resource Selection by Animals** B.F. Manly, L. McDonald, D.L. Thomas, Trent L. McDonald, Wallace P. Erickson, 2007-05-08 We have written this book as a guide to the design and analysis of field studies of resource selection concentrating primarily on statistical aspects of the comparison of the use and availability of resources of different types Our intended audience is field ecologists in general and in particular wildlife and fisheries biologists who are attempting to measure the extent to which real animal populations are selective in their choice of food and habitat As such we have made no attempt to address those aspects of theoretical ecology that are concerned with how animals might choose their resources if they acted in an optimal manner The book is based on the concept of a resource selection function RSF where this is a function of characteristics measured on resource units such that its value for a unit is proportional to the probability of that unit being used We argue that this concept leads to a unified theory for the analysis and interpretation of data on resource selection and can replace many ad hoc statistical methods that have been used in the past *Political Animals* Jesse

Donahue, Erik Trump, 2007-01-01 *Political Animals* offers a unique study and perspective on the relationship between politics and the art found in American zoos and aquariums Jesse Donahue and Erik Trump examine the ways that zoos and aquariums have successfully served as sculptural gardens for the masses and have incorporated art and architecture that convey political messages about both the patrons and the animals This book demonstrates how art has been used for a range of economic and political purposes including providing jobs a medium to reach out to minority interest groups a fundraising tool and a surrogate for the animals themselves Donahue and Trump skillfully analyze and compare zoos to other areas of public art to highlight the calculated strategies on the part of the zoos that have incorporated a range of artistic styles for different audiences Incorporating photographs of zoo and aquarium art from around the country *Political Animals* is an exciting and captivating text for the mind and eye **Animal Homes: Read Along or Enhanced eBook** Dona Herweck

Rice, 2024-02-13 Every animal has a home and each home is unique This brightly illustrated book introduces young learners to some of the places that are home to animals New readers will build foundational reading skills with this book that has

,2019-08-15 **Burrows (Learn About: Animal Homes)** Claire Caprioli,2025-09-02 A perfect book to teach kids about burrows and the animals that make them their home A burrow is a hole or tunnel in the ground that animals dig to live in You might know that some rabbits live in burrows but did you know that many other animals such as meerkats and puffins do too With amazing photos and lively text this book explores how animals build burrows and introduces the different creatures that make them their homes Get ready to learn all about burrows ABOUT THIS SERIES Animals live in all sorts of amazing homes These cozy places keep them safe and warm are conveniently located near food and water and provide a secure place for their little ones Some animals build their homes high up in the trees while others dig deep underground or create hideaways underwater Dive into the fascinating world of animal homes from burrows to dens nests and reefs and meet the incredible creatures that live there Bursting with vibrant photographs and packed with fun facts this series sparks curiosity and a love for wildlife *Radio Tracking and Animal Populations* Joshua Millspaugh,John M. Marzluff,2001-08-14 Radio Tracking and Animal Populations is a succinct synthesis of emerging technologies and their applications to the empirical and theoretical problems of population assessment The book is divided into sections designed to encompass the various aspects of animal ecology that may be evaluated using radiotelemetry technology experimental design equipment and technology animal movement resource selection and demographics Wildlife biologists at the leading edge of new developments in the technology and its application have joined forces **Animal Welfare Information Center Bulletin** ,1999 **Navigator FWK** Pearson Education,2002-04-26 Navigator is a KS2 reading scheme which covers fiction and non fiction It provides material to give pupils a 20 minute guided reading session per week during each school year *Martens and Fishers (Martes) in Human-Altered Environments* Daniel J. Harrison,Angela K. Fuller,Gilbert Proulx,2006-02-28 Martens and Fishers Martes in Human Altered Environments An International Perspective examines the conditions where humans and martens are compatible and incompatible and promotes land use practices that allow Martes to be representatively distributed and viable All Martes have been documented to use forested habitats and 6 species excluding the stone marten are generally considered to require complex mid to late successional forests throughout much of their geographic ranges All species in the genus require complex horizontal and vertical structure to provide escape cover protection from predators habitat for their prey access to food resources and protection from the elements Martens and the fisher have high metabolic rates have large spatial requirements have high surface area to volume ratios for animals that often inhabit high latitudes and often require among the largest home range areas per unit body weight of any group of mammals Resulting from these unique life history characteristics this genus is particularly sensitive to human influences on their habitats including habitat loss stand scale simplification of forest structure via some forms of logging and landscape scale effects of habitat fragmentation Given their strong associations with structural complexity in forests martens and the fisher are often considered as useful barometers of

forest health and have been used as ecological indicators flagship and umbrella species in different parts of the world Thus efforts to successfully conserve and manage martens and fishers are associated with the ecological fates of other forest dependent species and can greatly influence ecosystem integrity within forests that are increasingly shared among wildlife and humans We have made great strides in our fundamental understanding of how animals with these unique life history traits perceive and utilize habitats respond to habitat change and how their populations function and perform under different forms of human management and mismanagement This knowledge enhances our basic understanding of all species of Martes and will help us to achieve the goal of conserving viable populations and representative distributions of the world s Martes their habitats and associated ecological communities in our new millennium

Carnivore Ecology and Conservation

Luigi Boitani,Roger A. Powell,2012-01-12 Animals that must hunt and kill for at least part of their living are inherently interesting to many people and the role that carnivores play in biological communities attract interest from ecologists and conservation biologists Conflicts with human activities stimulate continual debates about the management of carnivore populations and throughout the world people seek workable solutions for human carnivore coexistence This concise yet authoritative handbook describes research methods and techniques for the study and conservation of all terrestrial carnivore species Particular attention is paid to techniques for managing the human carnivore interface Descriptions of the latest methodologies are supported by references to case studies whilst dedicated boxes are used to illustrate how a technique is applied to a specific land cover type species or particular socio economic context The book describes the most recent advances in modelling the patterns of animal distributions movements and use of land cover types as well as including the most efficient methods to trap handle and mark carnivores Carnivores are biogeographically diverse and whilst extensive scientific research has investigated many aspects of carnivore biology not all species have been equally covered This book is unique in its intention to provide practical guidance for carrying out research and conservation of carnivores across all species and areas of the world
