Animals Near And Far:

Home Ranges of Animals Roger A. Powell, 2025-10-21 Animals have tremendous agency to understand the world around them and to plan how to take best advantage of that world to meet their requirements Their perception of the world differs from humans and includes knowledge emphasizing different senses This book argues that to understand animals home ranges which are integral to the behavior and ecology of animals biologists must understand their cognition of their environments Presenting diverse complementary approaches to studying home ranges this book shows how using multiple approaches sheds a broad light on how and why animals behave as they do The book also provides many examples showing how hypothesis driven research provides strong insights into animal behavior and ecology [Exploring Animal Behavior Through Sound: Volume 1](#) Christine Erbe, Jeanette A. Thomas, 2022-10-03 This open access book empowers its readers to explore the acoustic world of animals By listening to the sounds of nature we can study animal behavior distribution and demographics their habitat characteristics and needs and the effects of noise Sound recording is an efficient and affordable tool independent of daylight and weather and recorders may be left in place for many months at a time continuously collecting data on animals and their environment This book builds the skills and knowledge necessary to collect and interpret acoustic data from terrestrial and marine environments Beginning with a history of sound recording the chapters provide an overview of off the shelf recording equipment and analysis tools including automated signal detectors and statistical methods audiometric methods acoustic terminology quantities and units sound propagation in air and under water soundscapes of terrestrial and marine habitats animal acoustic and vibrational communication echolocation and the effects of noise This book will be useful to students and researchers of animal ecology who wish to add acoustics to their toolbox as well as to environmental managers in industry and government **Animals Near and Far** Jenna Lee Gleisner, 2013-07 Introduces the opposites near and far by comparing the behavior of such animals as fox pups that stay near dens and butterflies that migrate far south **Getting Back Into Place** Edward S. Casey, 1993 Offers a philosophical exploration of the pervasiveness of place Presenting an account of the role of place in human experience this book points to place's indispensability in navigation and orientation The role of the lived body in matters of place is considered and the characteristics of built places are explored **Mindreading Animals** Robert W. Lurz, 2011-07-29 A comprehensive examination of a hotly debated question proposes a new model for mindreading in animals and a new experimental approach Animals live in a world of other minds human and nonhuman and their well being and survival often depends on what is going on in the minds of these other creatures But do animals know that other creatures have minds And how would we know if they do In Mindreading Animals Robert Lurz offers a fresh approach to the hotly debated question of mental state attribution in nonhuman animals Some empirical researchers and philosophers claim that some animals are capable of anticipating other creatures behaviors by interpreting observable cues as signs of underlying mental states others claim that

animals are merely clever behavior readers capable of using such cues to anticipate others behaviors without interpreting them as evidence of underlying mental states Lurz argues that neither position is compelling and proposes a way to move the debate and the field forward Lurz offers a bottom up model of mental state attribution that is built on cognitive abilities that animals are known to possess rather than on a preconceived view of the mind applicable to mindreading abilities in humans Lurz goes on to describe an innovative series of new experimental protocols for animal mindreading research that show in detail how various types of animals from apes to monkeys to ravens to dogs can be tested for perceptual state and belief attribution

Sensory Biology of Aquatic Animals Jelle 1987,Richard R. Fay,William N. Tavalga,2012-12-06 This volume constitutes a series of invited chapters based on presentations given at an International Conference on the Sensory Biology of Aquatic Animals held June 24 28 1985 at the Mote Marine Laboratory in Sarasota Florida The immediate purpose of the conference was to spark an exchange of ideas concepts and techniques among investigators concerned with the different sensory modalities employed by a wide variety of animal species in extracting information from the aquatic environment By necessity most investigators of sensory biology are specialists in one sensory system different stimulus modalities require different methods of stimulus control and generally different animal models Yet it is clear that all sensory systems have principles in common such as stimulus filtering by peripheral structures tuning of receptor cells signal to noise ratios adaption and disadaptation and effective dynamic range Other features such as hormonal and efferent neural control circadian reorganization and receptor recycling are known in some and not in other senses The conference afforded an increased awareness of new discoveries in other sensory systems that has effectively inspired a fresh look by the various participants at their own area of specialization to see whether or not similar principles apply This inspiration was found not only in theoretical issues but equally in techniques and methods of approach The myopy of sensory specialization was broken in one unexpected way by showing limitations of individual sense organs and their integration within each organism For instance studying vision one generally chooses a visual animal as a model

Animals and the Human Imagination Aaron S. Gross, Anne

Vallely, 2012-04-24 Human beings have long imagined their subjectivity ethics and ancestry with and through animals yet not until the mid twentieth century did contemporary thought reflect critically on animals significance in human self conception Thinkers such as French philosopher Jacques Derrida South African novelist J M Coetzee and American theorist Donna Haraway have initiated rigorous inquiries into the question of the animal now blossoming in a number of directions It is no longer strange to say that if animals did not exist we would have to invent them This interdisciplinary and cross cultural collection reflects the growth of animal studies as an independent field and the rise of animality as a critical lens through which to analyze society and culture on a par with race and gender Essays consider the role of animals in the human imagination and the imagination of the human the worldviews of indigenous peoples animal human mythology in early modern China and political uses of the animal in postcolonial India They engage with the theoretical underpinnings of the animal protection movement representations of animals in children s literature depictions of animals in contemporary art and the philosophical positioning of the animal from Aristotle to Derrida The strength of this companion lies in its timeliness and contextual diversity which makes it essential reading for students and researchers while further developing the parameters of the discipline
