Howard, 2012-02-24 The three volume work Perceiving in Depth is a sequel to Binocular Vision and Stereopsis and to Seeing in Depth both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods with an emphasis on experience dependent neural plasticity. An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements Adventures of a Mathematician S. M. Ulam, Stanislaw M. Ulam, 1991-07-23 The true story that inspired the 2020 film The autobiography of mathematician Stanislaw Ulam one of the great scientific minds of the twentieth century tells a story rich with amazingly prophetic speculations and peppered with lively anecdotes As a member of the Los Alamos National Laboratory from 1944 on Ulam helped to precipitate some of the most dramatic changes of the postwar world He was among the first to use and advocate computers for scientific research originated ideas for the nuclear propulsion of space vehicles and made fundamental contributions to many of today s most challenging mathematical projects With his wide ranging interests Ulam never emphasized the importance of his contributions to the research that resulted in the hydrogen

bomb Now Daniel Hirsch and William Mathews reveal the true story of Ulam's pivotal role in the making of the Super in their historical introduction to this behind the scenes look at the minds and ideas that ushered in the nuclear age An epilogue by Fran oise Ulam and Jan Mycielski sheds new light on Ulam's character and mathematical originality
