**Community Ecology** Gary George Mittelbach, Brian J. McGill, 2019 Community ecology has undergone a transformation in recent years from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study including the linkages between communities separated in space metacommunity dynamics niche and neutral theory the interplay between ecology and evolution eco evolutionary dynamics and the influence of historical and regional processes in shaping patterns of biodiversity To fully understand these new developments however students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks This new edition fulfils the book's original aims both as a much needed up to date and accessible introduction to modern community ecology and in identifying the important questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level

DeWoody, John W. Bickham, Charles H. Michler, Krista M. Nichols, Gene E. Rhodes, Keith E. Woeste, 2010-06-14 Recent advances in molecular genetics and genomics have been embraced by many in natural resource conservation Today several major conservation and management journals are now using genetics editors to deal solely with the influx of manuscripts that employ molecular data The editors have attempted to synthesize some of the major uses of molecular markers in natural resource management in a book targeted not only at scientists but also at individuals actively making conservation and management decisions To that end the text features contributors who are major figures in molecular ecology and evolution many having published books of their own The aim is to direct and distil the thoughts of these outstanding scientists by compiling compelling case histories in molecular ecology as they apply to natural resource management
